

Book name: A book that describes the entire universe correctly, modified and modified2

The author of the book: architect Hisham Ramadan Ahmed Obaid

University from which I graduated: Cairo Higher Institute of Engineering, Computer Science and Management

2

Important warning

The copy of this book, entitled –, is a book that correctly describes the entire universe, which is written at the bottom of the page of this title

Nb. This edition is the last edition of the book, meaning that this edition of the book is the last modified edition

The modified version is not the last modification of the book, and this version, entitled –, the book describing the entire universe correctly, modified, modified 2, is newer than it, but it is not the last, meaning that if we discover an error or want to add new information, we will download a copy with the same title, changing the number from 2 to 3, so it will become The book describes the entire universe correctly, modified, modified,

3

modified, 3, and so on whenever we want to modify the book. Thank you.

The elements that I added and modified in this version are –. I added a lesson on human races, –and modified the lesson on the ideal life of man, the lesson on worship in general in the entire book, and the lesson on the general and correct rule regarding the matter of bearing fruit

4

Elements

First, the introductory part of the book

1 – Introduction

2 - Introduction to the book

3- Clarifying the body

Body example. A

A- Components of the body and the function of each component of the body

Description

5

The three stages of the process of bodies emerging and branching out from each other in the body

The first stage

E- The second stage

N- The third stage

P- How to feed and then grow

A panel on how to display the objects emanating from the body on the seventh body in an organized manner for the seventh body to use in performing its task

6

The last panel is a panel describing the process of fruiting fruits for each of the seven components and how to present them to the seventh component and benefit from them

4- Clarifying the five stages that the book goes through until we reach the achievement of the only desired goal, which is to bear witness that there is no god but God Almighty alone, with no partner

Secondly, the part related to the book itself

5 - The first body is the Earth

A- The general condition of the Earth's body

B- Location of the Earth body

C- The function of the Earth body

D - The seven components of the Earth's body

7

E – The function of each of the seven components of the Earth's body

F- Description

The three stages of the process of bodies emerging and branching out from each other in the Earth

The first stage

E- The second stage

N- The third stage

6 - The second body is the body, the layer on which life exists

8

A- The general condition of the second body, the body, the layer on which life exists

B- The location of the body, the layer on which life is based

C - The function of the body is the layer on which life is based

D - The seven components of the body, the layer on which life is based

The function of each of the seven components of the body is the layer that has life

F- Description

9

The three stages of the process of bodies emerging and branching out from each other in the body, the layer on which life exists

The first stage

E- The second stage

N- The third stage

7 - The third body is the body, the living organism

10

B- Location of the body, the living organism

C- The function of the body and the organism

D- The seven components of the body

F- Description

The three stages of the process of bodies
emerging and branching out from each other in
the body of a living organism

The first stage

E- The second stage

N- The third stage

J – Nutrition in the living organism

A painting of how the body displays the living organism and the bodies emanating from it on the seventh human body in an organized manner for the seventh human body to use in performing its mission

The last panel is a panel describing the process of fruiting fruits in each of the seven living organisms and how they present the seventh component and benefit from it

N - The three stages of union of the seven components of the living organism and the type of each union

12

E - The three functions, which are in three stages for each of the six living organisms

8 - The fourth body: The seven body tasks that a person is assigned to do

B- The location of the body, the seven tasks that a person is assigned to do

C- Body function. The seven tasks that a person is assigned to do

D- The seven components of the body. The seven tasks that a person is assigned to do

F- Description

The three stages of the process of bodies emerging and branching out from each other in

13

the body are the seven tasks that a person is assigned to do

First stage

E- The second stage

N- The third stage

A painting of how the body displays the seven tasks, the bodies emanating from it, on the seventh body, the worshiping person, in an organized manner for the seventh body, the worshiping person, to use in performing his worship mission

The last panel is a panel describing the process of bearing fruit for a person in every task he

14

performs in order to carry out the seventh task,
which is the task of worship

9 - The fifth body, the body

A - The general condition of the galactic body

B- Location of the galactic body

F- Description

The three stages of the process of bodies
emerging and branching out from each other in
the galactic body

First stage

E- The second stage

15

N- The third stage

D- The process of spiritual circumambulation of the galactic body

Third, the part on important elements explained in detail

Study the description of all human races correctly

Study the ideal life for a person

Lesson on clarifying the command of prayer

Study the tasks assigned to a person in detail

Work lesson

16

He studied the correct general rule for the matter of fruits in bodies

An illustrative general picture of the book

Describe the process of the sun's rotation above the Earth

Fourth, reference books for the book

The book Secrets of the Numerical and Cosmic Miracles

First, the introductory part of the book

Introduction and introduction to the book

We would like to present to the respected and esteemed scholars of the Earth and to all the peoples of the Earth this great book, the Book

of Description of the Universe, the Book of Description of the Universe is a book that contains everything that God Almighty has commanded us to explore, then know, and then describe in the universe correctly

Description of the universe

The universe is composed of two parts, a lower part and a higher part. The lower part begins from the lowest layer of the first body from the lowest in the lowest part of the universe, which is the body, the Earth, up to the belly of the first heaven of the seven heavens, and the upper part begins from the surface of the first heaven of the seven heavens until the surface of the seventh heaven of The seven heavens, above which is the inhabited house, the house

of God Almighty, the Almighty, in the upper part of the universe and the lower part of The universe God Almighty Almighty commanded us to explore it, then know it, then describe it, then write down its description in books, then explain it to the earth scientists who explain it to the peoples of the earth, but as for the highest part of the universe, God taught us only a little of it and made much of it unseen that man does not know, and God Almighty commanded us to do not We try not to explore the many unseen things that are in it, and the little that God has taught us in the highest part of the universe is that part The highest part of the universe is a body composed of seven heavens above each of the seven heavens, the heavens of a paradise of heaven, but the seventh heaven is above it the throne of God

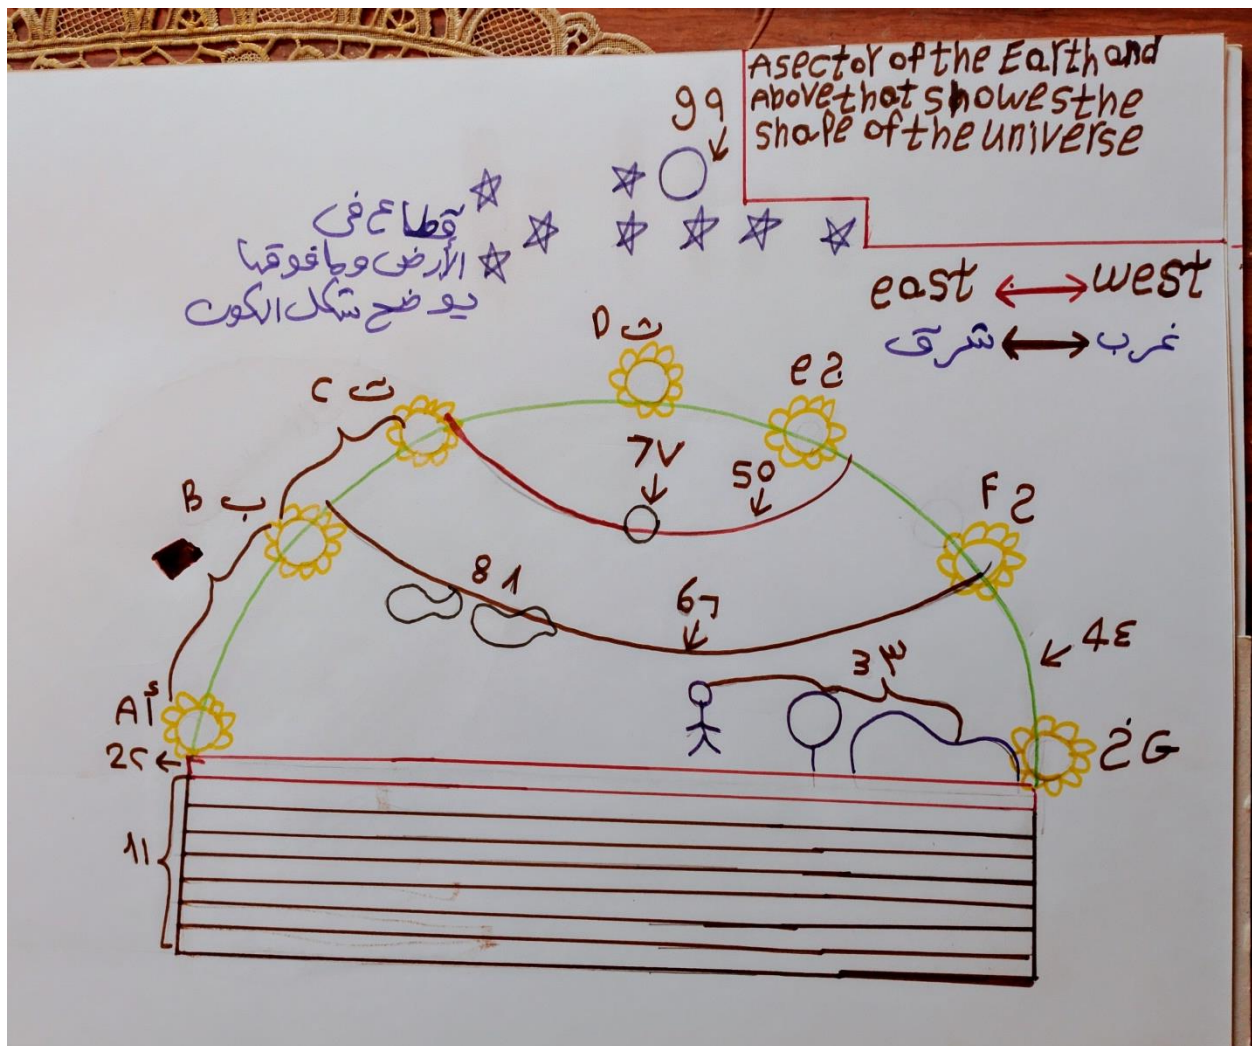

Almighty, and around it is the inhabited House, and those who circumambulate around the throne of God in the inhabited House, and every human being or jinn of the jinn enters the heavens that In the six heavens, according to his work, the least of the people or the jinn in good deeds will enter Paradise, which is above the first heaven and higher than them A degree in good deeds that enters Paradise above the second heaven, and so on. The highest Paradise is Paradise above the sixth heaven, which is the highest Paradise of Paradise, which is entered by prophets, messengers, and martyrs, and God also taught us that the people of Paradise marry beautiful fairies, and since God Almighty Almighty commanded us to explore, then know, then Describe the lower part of the universe, then write down its description in a

book. We will describe the lower part of the universe

The lower part of the universe

The lower part of the universe consists of five bodies located on top of each other, and the first of these bodies from the lowest to the highest is the Earth body, above which the second body carries the body, the layer on which life lives, on which the third body lives, the body, the living organism that prepares the earth for man and provides him with all The needs he needs in order to carry out the work of the fourth body, the seven body, the tasks assigned to carry out its work, and at very long distances from the body, the layer On which there is life, the fifth body is located, which is

the galactic body, and at these distances far from the body there is the layer on which billions of galaxies live. We will describe the five bodies in the lowest part of the universe gradually from the lowest to the highest, that is, starting from the Earth body and ending with the galactic body

1-the Earth body and its seven layers

24

2- The body is the layer on which life rests, on which the body rests the earth and its seven plots of land

3- The living being body that lives on the layer on which its seven beings live, which includes the living being, the human being who performs the body's seven tasks

4- Astronomy or the path of the sun

5-the astronomy or path of the moon

6- Astronomy or the path of clouds

7- The moon

8-clouds

9-galaxies and stars

a-b-c-d-e-f-g- different and different states of the sun

Clarifying the body

We have mentioned the body thing more than once, so what is the body completely and correctly, for example the body. A

The body consists of seven components

The first component is from the beginning, whether from the bottom if the body is vertical or from the right if the body is horizontal, and its function is to stabilize the six components of the body after it in the correct place

The second component's function is to combine with the first component in stabilizing and carrying the five components of the body

The third component's function is to eliminate toxins in the body

The fourth component's function is to connect all six components of the body to it so that the body becomes one unified body, and its function is also to supply the six components of the body with most of the needs it needs

The fifth component's function is to grasp the things that the body feeds on, preparing them

and then handing them over to the seventh component of the body or to anything else

The sixth component is characterized by beauty and elegance, and its three functions are to add some beauty, sophistication, and elegance to the body, and to connect the fifth component (the link connected to all components of the body) and the seventh component, and to give the seventh component sufficient flexibility for movement

The seventh component is the component in which each of the six components performs its function in order to provide seven needs that it needs from each component in order to be able to perform its single task towards the seven

components that are in the next body. In these six components, each component paves the way for the next component after performing its function, knowing that each One of the six components has three functions, one towards the next component, one towards the general body, and seven towards the component VII

These six components do not perform their functions at the same time, but rather perform their functions in six stages, meaning that the first component first performs its function as the first stage of the six components performing their functions, then the second component, and so on until the sixth component, and they perform these functions in order for the seventh component to perform its mission towards the next body

Note –: Each of these seven components has one or more components represented by seven shapes

Note: Any body at any of the three stages of its bifurcation has three components, the seven components of which are based on existence, and in these seven components each component consists of two pairs, and after that the first two components and the other two components unite in these seven components to become five components

Here are the details

Description

The three stages of the process of bodies emerging and branching out from each other in the body

30

The first stage

The three components

1, 2 and 3 as an example

The seven components

They are the seven components, and they are based on growth

The five integrated growth challenges that the body presents as a task assigned to them

After the seven components grow, the first two components and the other two components combine

The second stage

The three components

31

The seven types of each of the five components that exist are an example

4, 5 and 6

The seven components are the seven types of each of the five components

The five integrated growth challenges that the body presents as a task assigned to them

The seven types after the union of the first two types and the other two types and their growth was from the beginning, that is, in the first stage

The third stage

32

The three components of the seven organs that make up each of the five types of existence are, for example, 7, 8, and 9

The seven components are the seven organs that make up each of the five types

The five integrated growth challenges that the body presents as a task assigned to them

The seven members that make up each of the five types after the union of the first two members and the other two members

Description of the feeding process

Nutrition represents, from a spiritual standpoint, circumambulation around God Almighty, the Almighty, in His correct form and description, which is that righteous creatures circumambulate around God, the Almighty, the Almighty, seven times, but due to the greatness of God, the Almighty, the Almighty, and His exaltation, they do not reach Him, and here in the body, each of its seven components circumambulates once. About God Almighty, the Almighty, and the time is completed in three stages, and each component circumambulates spiritually or is nourished in order to It grows and then performs, as we said, three functions: the first and primary is providing the seventh component with seven needs that it needs in order to perform its task, one towards the seven components in the next

34

body, the second and secondary is providing the next component with something that it needs in order to carry out the process of nutrition and then growth, and the third is providing something that the body needs in general

How to feed and then grow

The first stage

One of the stages of nutrition and then growth for the seven components of the body is that God Almighty creates the seven components after they are nourished in some way by a third, and in this stage the first component unites with the second component so that after

the end of the third stage they become a body for themselves and two united components that are fully developed for the body. A

The second stage

Increases the amount of food. As for the seven organisms at a rate of two-thirds, the first component is nourished and grows at a rate of two-thirds and becomes ready to carry the second component after it, so the second component after it is nourished and grows at a rate of two-thirds and becomes ready to carry the third component after it, so the third component after it is nourished and grows at a rate of two-thirds and becomes ready to carry the fourth component after it, so the fourth

component is nourished after it. After it, it grows by two-thirds and becomes ready to carry the fifth component after it, so the fourth component after it grows by two-thirds and becomes ready to carry the fifth component after it, so the fifth component after it is nourished and grows by a percentage. The third component becomes ready to carry the sixth component after it, so the sixth component after it is nourished and grows by a third, and the sixth component becomes ready to carry the seventh component after it, so the seventh component is nourished. It grows by two-thirds, and at this stage the fourth component unites with the third component, united with the second component, with the fifth component, and with the sixth component, united with the seventh component, and this

union does not mean that these united components will remain a body for themselves after the completion of growth, but rather that this union makes the body a body. One united

The third stage

The amount of food increases for the seven components by three-thirds, so the first component is nourished and grows by three-thirds or completely, and becomes ready to carry the second component after it, so the second component is nourished and grows by three-thirds, and becomes ready to carry the third component after it, so the third component is nourished and grows by three-thirds, and becomes ready to carry the fourth

The next component feeds, then the fourth component after it grows in a ratio of three-thirds and becomes ready to carry the fifth component after it. The fifth component feeds, then grows in a ratio of three-thirds and becomes ready to carry the sixth component, then the sixth component feeds, then grows in a ratio of three-thirds, and the six components become ready to carry the seventh component, so the seventh component feeds and grows in a ratio of three. Three, and at this stage, the sixth component unites with the seventh component, so that after growth is complete, they become one body in relation to themselves

A panel on how to display the objects emanating from the body on the seventh body

in an organized manner for the seventh body to use in performing its task

He chooses the seventh component of the six components he needs from them to perform his task and then performs his task

The last panel is a panel describing the process of fruiting fruits for each of the seven components and how to present them to the seventh component and benefit from them

After the fruits of each of the six components bear fruit, she presents them to the seven components in the next body and then chooses from them however she wants and according to her needs

The general rule for fruits is that in each of the seven components of the body there are ten fruit holders, and each holder has three fruits,

40

so the number of fruit holders in each body is 7 times 10, equal to 70, and the number of fruits is equal to 3 times 70, equal to 210 fruits, and we should not forget that there are seven copies of each. One of the seven organs of the body, so the number of fruits in each body is equal to 7 in 210

Equals 1470

The Messenger of God, may God bless him and grant him peace, said, "Otro, and we notice here in the matter of the body taken as an example for all the bodies that we will explain, that the number of components is three, and the components of the body that are based on nutrition until they grow are seven, and these

41

seven components, when they grow and unite, become five, and that the number of fruits is three in each fruit bearer"

Clarifying the five stages that the book goes through until we reach the achievement of the only desired goal, which is to bear witness that there is no god but God Almighty alone, with no partner

The first stage

It is the stage of knowing information, describing the body, the Earth, the body, the

layer on which life is based, the body, the living being, and the body, the galaxy

The second stage

It is the stage of benefit from this information, and the benefit of this information is that there are six tasks assigned to do their work, and we will do them by knowing this information, and these tasks are assigned to do their work

The task of doing work, the basics of life, the task of doing work, disease prevention, the task of doing medical work, the task of doing work, well-being, the task of doing work, building the land or work

The third stage

We do these six tasks so that we can do six tasks, which are the tasks of worship, the fourth stage, we do the six tasks of worship so that we can do the work of the task of worship, prayer, the fifth stage, we do the work of the task of worship, prayer, so that we bear witness that there is no god but God Almighty, the Almighty, the Almighty alone

A partner with him in an organized manner after getting up from the kneeling in which we swim

Secondly, the part related to the book itself

The first body is the Earth body

First, the general condition of the Earth's body

The general condition of the Earth body is that it is the first body from the beginning from the lowest in the lowest part of the universe, and this means that there is no body before it that can be relied upon to grow, so God Almighty created it from the beginning with complete growth

Secondly, the location of the Earth's body

The Earth body is located at the beginning of the lower part of the universe

Third, the function of the Earth's body

45

It is the body's load, the layer on which the living organism lives

Fourth, the seven components that make up the Earth body and the function of each component in it are:

The first component is the first layer, whose function is to stabilize the six layers of the Earth's body in their correct place

The second component is the second layer, whose function is to unite with the first layer in carrying out the process of fixing the five layers above them in the correct place and at the same time carrying the five layers above them

The third component is the third layer, whose function is to absorb sediments and rotten materials in the layers of the Earth's body until the layers of the Earth's body become clean and free of sediments and rotten materials

The fourth component The fourth layer is the layer that is located in the middle of the seven layers of the Earth body. It is connected to the layers of the Earth body that are above it and the layers of the Earth body that are below it. Its function is to connect the layers of the Earth body that are below it and the layers of the body that are above it, and to supply the layers of the body that are below it and the layers of

the body that are above it. Above it with most of the needs they need

The fifth component is the fifth layer, whose function is to grasp, then prepare, and then deliver what the body, the earth in general, needs to the body, the earth in general

The sixth component is the sixth layer, whose function is to connect the fifth layer to the seventh layer in some way and give the seventh layer flexibility in movement in some way

The seventh component The seventh layer
First, the six layers work and perform their functions in order to provide the seventh layer

with everything it needs to carry out its function, which is to carry the body The layer that has life on it The layer that has life on it represents four things, which are firstly a third of the two upper united layers from the top of the sixth layer, and secondly the seventh layer is not part of The two upper united layers, the sixth layer and the seventh layer, thirdly, are not a member of the body. The fourth is a basic and complete body, just like that The body is the earth and the body is the living organism

Note: Each of the seven layers has a component or component represented by seven shapes

The three stages of the process of bodies emerging and branching out from each other in the Earth

First stage

The three components

The first part is from the bottom, the middle part, and the upper part

The seven layers that are based on existence are:

First class

Second layer

Third class

Fourth class

Fifth class

Sixth class

Seventh class

50

The five united bodies in relation to themselves
The five united layers are

The first layer is combined with the second layer

Third class

Fourth class

Fifth class

The sixth layer is united with the seventh layer

The second stage

The three components, example 123, which are based on the seven elements that make up each of the layers

The seven components of the component are the seven elements

The five components of the United States are

51

The seven elements after the first two elements and the other two elements were united in them

The third stage

The three components, example 456, which are based on the seven organs that make up each element

The seven components of the ingredient are:

The seven organs that make up each element

The five components of the United States are

The seven members that make up each element after the union of the first two members and the other two members

52

Fruits in the ground body

The earth body has no seven copies or fruits

The second body is the body, the layer on which life exists

First, the general condition of the body, the layer on which life exists

The general condition of the body, the layer that has life on it, is that it is the second body after the body, the Earth, and since it is the body, the Earth precedes it, it can depend on it for one or more things, and indeed it depends on it in the matter of relying on it, meaning that

it carries it, but it does not depend on it for anything more than that, such as nutrition and then Growth is why God Almighty created it with complete growth and united in it the first two pieces of earth and the other two pieces of earth since The beginning and directly

Secondly, the location of the body, the layer on which life is based

The body, the layer with life on it, is located above the body, the Earth, and it represents a third of the two upper united layers, the sixth layer and the seventh layer from above

Third, the function of the body is the layer on which life is based

The function of the body, the layer on which life is based, is to carry out the work of preparing the appropriate soil for food and then the growth of the body, the living organism, by preparing it for the growth of plants on which most living organisms feed

Fourth, the seven components that make up the body, the layer on which life and function of each component are

The first component is the desert plot of land, whose function is to stabilize the body, the layer on which there is life, in its correct place and to control its balance by taking over the many and towering mountains that God

Almighty created specifically to stabilize the body, the layer on which there is life, and to control its balance, and its function is also to contain living organisms that are important to humans, such as Medicinal herbs and therapeutic organisms

The second component is the piece of land that is under the sea water, whose function is to unite with the desert piece of land in the matter of stabilizing the body, the layer of land on which there is life, and at the same time carrying the five pieces of land in the body, the layer on which there is life, and its third function is to carry the sea water, including the freedoms it contains, and its basic function is Living with ornamental freedoms in the water it contains

The third component is the frozen piece of land that is at the end of the body, the layer of the earth on which there is life, whose function is to contain the back of the creatures that God Almighty, the Almighty, created, meaning that God Almighty, the Almighty, teaches us what to do when the shapes and images of the things that we make run out, whether in food, drink, or clothing, or Other than that, examples of creatures contained in the piece of frozen earth that is at the end of the body are the layer of earth on which there is life They are large bears and amphibians that live in water and at the same time live on dry land

The fourth component is the forest plot of land, which contains a large number and many types of living organisms, and it is characterized by its vast area and has three functions: first, containing a large number and many types of living organisms, second, connecting three plots of land, which are connected to the rest of the plots of land, third, supplying the living organisms that live in other plots of land with most of its needs

The fifth component is the piece of land that carries vast areas of salt water on top of it, and whose function is to carry this water on which the sun's rays fall, so the water comes out in the form of water vapor and the salt remains in its place, then the water vapor is transformed at long distances from the water of the piece of

land on which vast areas of salt water are carried above it. To clouds carried by the wind to the lakes from which the plots of land that carry the fresh water that come from the lakes and their function are split It also contains large marine animals such as whales

The sixth component is the piece of dry land on the banks of fresh water on the piece of land that it carries fresh water, whose function is to prepare the appropriate soil for the nutrition and growth of plants and the rest of the living organisms, and the plants that grow in the dry plot of land are, firstly, mainly vegetables, and secondly, a few types of fruits and herbs, and birds that are eaten are raised in them

The seventh component is the piece of land that carries fresh water on top of it, which has three functions: first, containing the fresh water inside it, second, delivering fresh water to many living organisms over long distances, as it is characterized by its great length, third, stable life arises for the living organisms that live on its banks due to the presence of water in it in a permanent form. Throughout the year, this stability is followed by progress and urbanization

Note: Each of the seven plots of land is a plot of land of which there is a component or component represented by seven shapes or similar to seven copies, meaning that it is the body, the layer on which life consists of

60

Seven pieces of desert land

And seven pieces of sea land

And seven pieces of land between water and
land

And seven pieces of forest land

And seven pieces of ocean land

And seven pieces of land on the banks of the
rivers

And seven pieces of land are rivers

The body, the layer on which there is life, has
seven copies, but it has no fruits, but its
members are carriers of the living being, its
fruits, and the single waters, such as rivers

61

The three stages of the process of bodies emerging and branching out from each other in the body

First stage

The three components

Plots of dry land that do not have water on top of them, plots of wet land that have water on top of them, and a piece of frozen land that is between dry land and lands that have water on top of it

The seven plots of land

62

Rivers (head) - land (neck) – forests (body) –
oceans (terraces) – glacial areas (back) – seas
(hip) – desert (roots)

The five bodies united in relation to themselves
are the five plots of land

(rivers are united with land – forests – oceans
– glacial areas – seas are united with desert)

The second stage

First, the desert

The three components

63

Mountains, rainwater and clean sandy soil

The seven components of the desert body

And the seven members are similar to them

Al-ras is the area containing the population

The neck is the area containing the banks of the sea

The edges are the area containing the birds

The body is the area containing animals

Buttock special areas for relieving oneself

The hip is the area containing plants

Roots The area containing mountains

The five bodies united in relation to themselves to the components of the five plots of land

The area containing the banks of the sea is united with the area containing the population — The area containing birds - The area containing animals – The special area for relieving oneself – The area containing the mountains is united with the area containing plants

Sea body

The three components are

Sea land

Salt water in the sea

Mountains surrounding the sea to stabilize it

And the seven members are similar to them

Al-ras areas containing the population that Ali

65

Sea banks

The neck is the area containing marine vessels

The edges are the area containing the birds

Which is above and on the banks of the sea

The body is the area containing animals

Which is on the banks of the sea

Buttock special areas for relieving oneself

For kanats

The hip is the area containing plants in the sea

Roots The area that contains mountains on the outskirts

Sea

The five bodies united in relation to themselves to the components of the five plots of land

The area containing the marine areas is united with the area containing the population that lives on the banks of the sea — The area containing the birds above and on the banks of the sea - The area containing the animals on the banks of the sea – The special area for relieving oneself – The area containing the mountains is united with the area containing plants

Glacial areas between dry lands and lands with water above them

The three components

67

Mountain area that stabilizes icy areas

Ocean water

River water

And the seven members are similar to them

Al-ras is the area containing the population

The neck is the area on the banks of the ocean

The edges are the area containing the birds

The body is the area containing animals

Buttock special areas for relieving oneself

The hip is the area containing plants

Roots The area containing mountains

68

The five bodies united in relation to themselves to the components of the five plots of land

The area containing the banks of the ocean is united with the area containing the population — The area containing birds - The area containing animals – The special area for relieving oneself – The area containing the mountains is united with the area containing plants

Ocean

The three components

69

The area of mountains around the ocean that stabilize the ocean land

And the ocean land

And the salt water of the ocean

And the seven members are similar to them
Al-ras areas containing the population that Ali
Ocean banks

The neck is the area containing marine vessels
The edges are the area containing the birds

70

Which is above and on the banks of the ocean

The body is the area containing animals

Which is on the banks of the ocean

Buttock special areas for relieving oneself

For kanats

The hip is the area containing plants in the ocean

Roots The area that contains mountains on the outskirts

Ocean

The five bodies united in relation to themselves to the components of the five plots of land

The area containing the marine areas is united with the area containing the population that lives on the banks of the ocean — The area

71

containing the birds above and on the banks of the ocean - The area containing the animals on the banks of the ocean – The special area for relieving oneself – The area containing the mountains is united with the area containing plants

The forest

The three components

72

Forest land

: The area of mountains that stabilize the forest land

Rainwater and rivers

And the seven members are similar to them

Al-ras is the area containing the population

The neck is the area containing the banks of the ocean

The edges are the area containing the birds

The body is the area containing animals

Buttock special areas for relieving oneself

The hip is the area containing plants

Roots The area containing mountains

73

The five bodies united in relation to themselves to the components of the five plots of land

The area containing the banks of the ocean is united with the area containing the population — The area containing birds - The area containing animals – The special area for relieving oneself – The area containing the mountains is united with the area containing plants

Land body characterization plate with river

The three components of land

Fertile land

River and

The mountainous area that stabilizes the land

And the seven members are similar to them

Al-ras is the area containing the population

The neck is the area containing the river banks

The edges are the area containing the birds

The body is the area containing animals

Buttock special areas for relieving oneself

The hip is the area containing plants

Roots The area containing mountains

The five bodies united in relation to
themselves to the components of the five plots
of land

The area containing the banks of the river is
united with the area containing the population

75

— The area containing birds - The area containing animals – The special area for relieving oneself – The area containing the mountains is united with the area containing plants

River components

Mountains anchoring the river land

River land

Rain clouds that feed the river with the water of the estate

And the seven members are similar to them

Al-ras is the area containing the population that

She lives on the banks of the river

76

The neck is the area containing live canines

Inside the river

The edges are the area containing the birds

Which is above and on the banks of the river

The body is the area containing animals

Which is on the banks of the river

Buttock special areas for relieving oneself

The hip is the area containing plants within the river

Roots The area containing mountains

The five bodies united in relation to themselves to the components of the five plots of land

The area containing the living canines within the river is united with the area containing the

population — The area containing the birds above and on the banks of the river - The area containing the animals on the banks of the river – The special area for relieving oneself – The area containing the mountains is united with the area containing the plants

The third stage

Example of an area containing animals on the banks of the river

The three components are the river, its shore, and the land next to it

The third body is the body, the organism

First, the location of the living organism

The seven living organisms live on the body, the layer that has life on it, and most of the seven living organisms feed on the living organism, the plant whose seed is placed in the soil of the body, the layer that has life of various kinds, then it is watered with water and then grows

Secondly, the function of the body and the organism

The function of the living body is to provide the person with everything he needs in order for

the body to perform the seven tasks it is assigned to do

Thirdly, the seven components of the living body are:

The first component is the mountains that are similar to the first component of the body

The second component is plants that are similar to the second component of the body

The third component is reptiles, which are similar to the third component of the body

80

The fourth component: Animals that are similar to the fourth component of the body

The fifth component is birds that are similar to the fifth component of the body

The sixth component is fish and marine fish in general, which are similar to the sixth component of the body

The seventh component is the human being, which is similar to the seventh component of the body

F- Description

81

The three stages of the process of bodies emerging and branching out from each other in the body of a living organism

The first stage

First, the three components on which the seven living organisms are based are nutrition, growth, and then performing their functions

Sun, air and moon

Secondly, the seven living organisms that have the three components that we mentioned are:

Mountains, plants, reptiles, animals, birds, fish, seas and humans

Third, the five living organisms that are united and fully developed

Mountains are united with plants as a body in relation to themselves, and the goal of their union and making them one body in relation to themselves is to stabilize the body, the layer that has life in its correct place, as well as to stabilize the five living organisms in the correct nutritional state and for the living organism to carry plants to them. The second function is that mountains provide plants with their presence on fixed ground and provide Plants provide reptiles with their own food, while the

third function is that both mountains and plants provide seven human needs

The second component: Reptiles: There is an anomaly in the matter of reptiles from the basic rule of bodies, meaning that after God cursed reptiles, they no longer participate in the task of providing humans with everything they need, but we mention them in the body of the living organism before they are cursed and not after the curse

The third component is animals

The fourth component is birds

The fifth component is the navies united with man

B- Explanation and clarification of the comprehensive description board for the body, the primary organism in the first stage

First

Explaining and clarifying the three components of the living body, which are the sun, air, and moon, on nutrition

First, the three components: the sun, the air, and the moon, the seven living organisms, carry out the process of nutrition, which represents the spiritual circumambulation of growth and around God Almighty in this way

First, the moon illuminates the layer on which all living creatures live at night

How the sun and air straighten the living organism Plant First, plants carry out the process of photosynthesis in order to take carbon dioxide gas from the atmosphere to breathe it from the pores of the leaves and give us oxygen gas, and this is through the sun and air

Reptiles: How to straighten the sun and the air. Before being cursed, reptiles first breathe the air and third, warm themselves with the heat of the sun in order to add some heat to them from the heat of the sun or the sun's rays to

strengthen their bones

How the sun straightens the air for animals:
First, they breathe air, third, they warm themselves during the day, and their bones are strengthened by the sun

How the sun and air straighten birds: First, they breathe air, third, they are warm, and their bones are strengthened by the sun

How to straighten the sun and air for the seas,
first to protect them from the sun falling on the water

How the sun and air straighten a person: First, he breathes air, third, he is warm, his bones are strengthened during the day by the sun, and his body's toxins also come out of the pores of the skin in the form of sweat from the sun

The seven entities are

The first component is the mountains that are similar to the first component of the body

The second component is plants that are similar to the second component of the body

The third component is reptiles, which are similar to the third component of the body

The fourth component: Animals that are similar to the fourth component of the body

The fifth component is birds that are similar to the fifth component of the body

The sixth component is fish and marine fish in general, which are similar to the sixth component of the body

The seventh component is the human being, which is similar to the seventh component of the body

After the seven living organisms grow, they unite to become one body consisting of five fully developed organisms and bodies for themselves consisting of seven organs

Thirdly, the five living organisms that are fully developed organs in relation to the body of the living organism and fully developed bodies in relation to themselves are

Mountains are united with plants as a body in relation to themselves, and the goal of their union and making them one body in relation to themselves is to stabilize the body, the layer on

which life is in its correct place, as well as to stabilize the five living organisms in the correct nutritional state, and the second function is that mountains provide plants with their presence on fixed ground, and plants provide reptiles with their own food. The third function is that both mountains and plants provide seven human needs

The second component: Reptiles: There is an anomaly in the matter of reptiles from the basic rule of bodies, meaning that after God cursed reptiles, they no longer participate in the task of providing humans with everything they need, but we mention them in the body of the living organism before they are cursed and not after the curse

91

The third component is animals

The fourth component is birds

The fifth component is the navies united with man

The second stage

And these five living organisms, each living organism in which is made up of seven types of organisms, and these seven organisms are

based on existence and life in its entirety, three components, and these seven organisms are completely united, and the first two organisms and the other two organisms are united and fully developed since they rose, nourished, and grew in the comprehensive description of the body. The living organism in the first stage

The evaluatorThe three components of integrated components: growth in relation to the body, the living organism, and bodies in relation to themselves, are of two types

A type that establishes bodies in relation to themselves on land

And the type of bodies that live in relation to their noses that live in the piece of land at the end of the land to the north, which is between dry lands and lands with water above them

And the type of bodies in relation to themselves in the water

There are three components that make bodies stand in relation to themselves on land

And the components by which bodies stand in relation to themselves, which are in the piece of land that is at the end of the earth, to the north, which is between the dry lands and the lands above which there is water

There are three components that make bodies stand in relation to themselves in water: First

The components that bodies have in relation to themselves on land

It is the piece of land, the desert, the piece of land, the fertile lands on the banks of rivers, and the piece of land with forests above it

Secondly, and the components that exist in relation to themselves, which are in the piece of land at the end of the land on the north side, which is between the dry lands and the lands above which there is water

It is the piece of land at the end of the land to the north, between the dry lands and the lands above which there is water

Thirdly, the components that bodies have in relation to themselves in water are:

Lands that carry ocean water, lands that carry sea water, and lands that carry river water

First, how to evaluate the three components on land, which are the desert plot of land, the fertile lands on the banks of rivers, and the lands that carry forests with the six living organisms above them

First, the desert piece of land, bodies exist in relation to themselves, the six living organisms

that the living organism provides to humans, which are important and important for the treatment of diseases

Secondly, the piece of land is the fertile land on the banks of the rivers, where the bodies stand in relation to themselves, the six living organisms that the living organism provides to man to provide him with the basics of life, and they are considered cheap in price

Thirdly, the piece of land above which there are forests, the six bodies stand in relation to themselves, which the living being body provides to man in order to provide man with well-being

Secondly, how to evaluate the piece of land at the end of the earth from the north side for the living organisms in it

Its function is to correct humans with creatures with soft and abundant fur to wear

Thirdly, the three components that support fish or marine fish that live in water: The first component is the cracks that contain river water, which support human life with fresh water and small delicious fish

The second component is the seas, in which human life is decorated with colorful fish, pearls, and coral

The third component is the oceans in which human life is carried out by large fish and the water vapor that comes out of them due to the sun and turns into clouds that rain down on the lakes with the rain of the waters of an estate, so the rivers feed with fresh water

The seven types of living organisms that make up each of the five living organisms

Note – There is a component of the seven components of each of the five basic living organisms, and it represents the living organism in which it is a component, a component, and is present in the three types of lands, and thus it is composed of seven components, each component present in a piece of land, and this is in addition to the remaining six types, of

which it is in its seven types, the fourth of them. In order, because the organ is similar to the middle of the body in each body in relation to itself among the five bodies

First, the body plate in relation to itself, the mountains are united with the body in relation to itself, the plants are noticeable, the purpose of the union of the body in relation to itself, the living organism, the mountains with the body in relation to itself, the living organism, the plants, is to adjust the balance of the earth and stabilize it in the correct state, and they have become one body for this reason, but in terms of the components of these two bodies in relation to For their united selves after they became one body, each of them is considered a body of its own and has seven components

The first painting is a comprehensive description of the body in relation to itself, the living organism, the mountains

First, the fourth basic component that represents the mountain being, which is composed of three components:

The mountains that stabilize the body are the layer on which life is located

The first component is the mountains that stabilize the desert plot of land, whose function is to stabilize the desert plot of land

The second component

Mountains that stabilize the green fertile lands on the banks of rivers, and whose function is to

stabilize the fertile lands on the banks of rivers
in particular

The third component is the mountains that
stabilize the lands above which there are
forests, and whose function is to stabilize the
lands above which there are forests in
particular

The fourth component is the mountains that
stabilize the frozen lands between land and
water

The fifth component is the mountains that
stabilize the lands that contain river water

102

The sixth component is the mountains that stabilize the lands that contain sea water

The seventh component is the mountains that stabilize the lands that contain ocean water

The first component is mountains with floors such as marble and granite, which are native to forests

The second component is the mountains of stones, whose function is to provide humans with the stones they need to build homes and facilities

It is native to forests

The third component is the mountains of plaster, such as cement and gypsum, whose function is to provide humans with one of their

needs, which is to connect the bricks of the wall to each other, and their homeland is the desert

The fifth component is mountains of hard metals such as iron, which are native to the desert

The sixth component is the mountains of precious metals, whose function is to provide humans with luxury by wearing jewelry, and they are native to the desert

The seventh component is the mountains of precious stones, whose function is to provide

104

humans with luxury by wearing precious stones in the form of necklaces and rings, and they are native to the forests

The second panel is a comprehensive description of the body in relation to itself, the living organism, plants

First, the fourth basic component that represents the plant organism, which is composed of three components:

Plants for feeding and eating living organisms of all kinds

105

Its components are

The first component is herbal plants with medicinal grains in the desert, whose function is to treat sick people and others, and they are three types: a type that humans feed on, a type that animals feed on, and a type that birds feed on

The second component is eating plants in fertile lands on the banks of rivers, called vegetables, whose function is to ensure the basics of life in terms of eating for humans, that is, for satisfaction, and two other types of eating animals and birds

The third component: Eating plants in forests are called fruits for human well-being

And two other types of animal food
Animals and birds

The fourth component is plants for human, bird and animal food in the frozen lands between land and water

The fifth component is plants for marine food in rivers

The sixth component is plants for marine food in the seas

The seventh component is plants for marine food in the oceans

The first component is secondary ornamental plants in the desert

107

The second component is plants for secondary decoration in lands on the banks of rivers

The third component is plants for secondary decoration in frozen lands between land and water

The fifth component is mainly ornamental plants in forests

The sixth component is plants for secondary decoration in the seas

The seventh component is plants for secondary decoration in the oceans

The third painting is a painting of a comprehensive description of the body in

relation to itself, snakes, and it does not have a complete description painting, as it is abnormal and cursed by God Almighty

The third painting is a painting of the comprehensive description of the body in relation to itself, whether living animals

First, the fourth basic component that represents the animal organism, which is composed of three components:

Animals eat animals that eat plants until their number decreases, and thus the level of animals that eat plants decreases, and thus there becomes an environmental balance, and these are its components

The first component The first component is animals that eat animals that eat plants, which represent a third of the animals, and whose function is to eat animals that eat plants, so that the level of eating animals that eat plants in the desert decreases

The second component is animals that eat animals that eat plants, which represent a third of animals, and whose function is to eat animals that eat plants, so that the level of eating animals that eat plants decreases, and their habitat is on the edges of the seas, and they are animals that can live on land and water

The third component is animals that eat animals that eat plants, which represent a third of animals, and whose function is to eat animals that eat plants, so that the level of

eating animals that eat plants in frozen lands between land and water, such as the bear, decreases

The fourth component is animals that eat animals that eat plants, which represent a third of animals, and whose function is to eat animals that eat plants, so that the level of eating animals that eat plants in forests, such as lions, decreases

The fifth component is animals that eat animals that eat plants, which represent a third of animals, and whose function is to eat animals that eat plants, so that the level of eating animals that eat plants decreases, and their habitat is in the edges of the oceans, and they are animals that can live on land and water

The sixth component: Animals that eat animals that eat plants, which represent a third of animals, and whose function is to eat animals that eat plants, so that the level of eating animals that eat plants in lands on the banks of rivers, such as the wolf, decreases

The seventh component: Animals that eat animals that eat plants, which represent a third of animals, and whose function is to eat animals that eat plants, so that the level of eating animals that eat plants decreases, and their habitat is the edges of rivers, and they are animals that can live on land and water

The first component is a transport animal in the desert called the camel

112

The second component is an animal for transportation in lands on the banks of rivers called the donkey

The third component is a forest transport animal called the horse

The fifth component is animals that provide meat and milk, which tends to be treated in the desert for humans

The sixth component is animals that provide meat and milk Which tends to satisfy people in lands on the banks of rivers

The seventh component is animals that provide meat and milk, which tends to be luxurious in forests for humans

Note –: These animals that do not eat humans have animals to eat and at the same time have abundant fur that we benefit from to make and spin clothes

The fourth painting is a painting of the comprehensive description of the body in relation to itself, the living being, the birds

First, the fourth basic component that represents the bird organism, which is composed of three components:

Birds that provide humans with adornment through their beautiful shape and sound

114

The first component is ornamental birds in the desert

The second component is ornamental birds on the seashore

The third component is ornamental birds in frozen lands between land and water

The fourth component is ornamental birds in the forests

The fifth component is ornamental birds on the banks of the oceans

The sixth component is ornamental birds in lands on the banks of rivers

The seventh component is ornamental birds on the banks of rivers

The first ingredient is birds to eat in the desert

The second component is birds to eat in lands on the banks of rivers

The third component is birds for eating and at the same time for decoration in the forests

The fifth component is birds that eat birds that eat plants in the desert

The sixth component is birds that eat birds that eat plants in forests

The seventh component is birds that eat birds that eat plants in lands on the banks of rivers

The fifth painting is a painting of a comprehensive description of the body in relation to itself, the living organism, the freedoms united with the living organism, the human being, a note here. The union among its goals is to bring together two beings who have elegance and sophistication, secondly, to be able to become a complete body, and here they are included in one comprehensive description painting

First, the first basic component that represents the marine organism, which is composed of the three aquatic components, is

Seafood is a plant-eater that provides food for humans in times of lack of food

117

The first component is plant-eating marine organisms in rivers, whose function is to provide food for humans through fish in rivers for the purpose of satiation

The second component is plant-eating seafood in the seas, whose function is to provide food for humans through fish with a delicious taste

The third component is plant-eating marine organisms in the oceans, whose function is to provide food for humans through large fish

The second component is freedoms for decoration in the seas, whose function is to provide luxury to humans by seeing their beautiful appearance

The third component is fish-eating marine fish that feed on eating plants, and whose function is to eat plant-eating fish, so that the level of plant-eating fish eating plants decreases, thus providing plants for them and others in the oceans and seas

First, the fourth basic component that represents the human being, which is composed of three components: Brown Ham Negroes with dark brown skin, whose job is work that requires strength in the body, height in stature, and roughness in the body, such as cutting mountain stones in the forests

The fifth component is the Caucasian Arabs from the Beni Sam, whose function is medical and therapeutic work

The sixth component is the Caucasian Romans from the Beni Sam, whose function is to make designs for things that humans use in general, due to their beautiful appearance and shape

The seventh component is the Banu Sham, who are the yellow Mongols with very white skin and a small body, whose job is the presidential work of companies and factories because they are characterized by a clear brain and acumen

These seven beings are completely united, in which the first two beings and the other two beings are united, and fully developed since they rose, nourished, and grew in the

120

comprehensive description of the body of the first living being in the first stage in this way

The five united bodies in relation to themselves are the five united living organisms

The five organisms of the body The living organism mountains in relation to itself

The first component is mountains with floors such as marble and granite, which are native to forests combined with

The second component is the mountains of stones, whose function is to provide humans with the stones they need to build homes and facilities

It is native to forests

121

The third component is the mountains of plaster, such as cement and gypsum, whose function is to provide humans with one of their needs, which is to connect the bricks of the wall to each other, and their homeland is the desert

The fourth basic component that represents the mountain being, which is composed of three components:

The mountains that stabilize the body are the layer on which life is based

The fifth component is mountains of hard metals such as iron, which are native to the desert

The sixth component is the mountains of precious metals, whose function is to provide

122

humans with luxury by wearing jewelry, and their homeland is the desert united with

The seventh component is the mountains of precious stones, whose function is to provide humans with luxury by wearing precious stones in the form of necklaces and rings, and they are native to the forests

The five components of the body for itself are plants

The first component is secondary ornamental plants in the desert combined with

123

The second component is plants for secondary decoration in lands on the banks of rivers

The third component is plants for secondary decoration in frozen lands between land and water

The fourth basic component that represents the plant organism, which is composed of three components:

Plants for feeding and eating living organisms of all kinds

The fifth component is mainly ornamental plants in forests

The sixth component is secondary ornamental plants in the seas combined with

124

The seventh component is plants for secondary decoration in the oceans

The five components of the body for itself, the living organism, animals

The first component is an animal for transportation in the desert called the camel, united with
The second component is an animal for transportation in lands on the banks of rivers called the donkey

The third component is a forest transport animal called the horse

The fourth basic component that represents the animal organism, which is composed of three components:

Animals eat animals that eat plants until their number decreases, and thus the level of animals that eat plants decreases, and thus there becomes an environmental balance

The fifth component is animals that provide meat and milk, which tends to be treated in the desert for humans

The sixth component is animals that provide meat and milk that tend to satisfy humans in lands on the banks of rivers

The seventh component is animals that provide meat and milk, which tends to be luxurious in forests for humans

The five components of the body for itself, the living organism, birds

The first component is birds to eat in the desert combined with

The second component is birds to eat in lands on the banks of rivers

127

The third component is birds for eating and at the same time for decoration in the forests

The fourth basic component that represents the bird organism, which is composed of three components:

Birds that provide humans with adornment through their beautiful shape and sound

The fifth component is birds that eat birds that eat plants in the desert

The sixth component is birds that eat birds that eat plants in the forests, united with

The seventh component is birds that eat birds that eat plants in lands on the banks of rivers

The five components of the body in relation to itself, the living organism, the body, marine or fish, are united with humans

First, the first basic component that represents the marine organism, which is composed of the three aquatic components, is Marine plant-eating, which provides food for humans in times of lack of food, is combined with

The second component is freedoms for decoration in the seas, whose function is to provide luxury to humans by seeing their beautiful appearance

The third component is fish-eating marine fish that feed on eating plants, and whose function is to eat plant-eating fish, so that the level of

plant-eating fish eating plants decreases, thus providing plants for them and others in the oceans and seas

The fourth basic component that represents the human being, which is composed of three components:

Brown Ham Negroes with dark brown skin, whose job is work that requires strength in the body, height in stature, and roughness in the body, such as cutting mountain stones in the forests

The fifth component is the Caucasian Arabs from the Beni Sam, whose function is medical and therapeutic work The sixth component is the Caucasian Romans from the Samites, whose

function is to make designs for things that humans use in general, due to their beautiful appearance and beautiful shape combined with

The seventh component is the Banu Sham, who are the yellow Mongols with very white skin and a small body, whose job is the presidential work of companies and factories because they are characterized by a clear brain and acumen

The third stage

These five organisms, each living organism is composed of seven organs, and these seven organs are based on the presence in a unified

form of the three parts of the body, which are completely united, and in which the first two organs and the other two organs are united and fully developed since they rose, nourished, and grew in the comprehensive description of the body of the living organism in the first stage

A comprehensive description board of the process of bodies emerging and branching out from each other in the body, the primary organism in the second stage, with an explanation

The three components of seven members to exist in a unified manner are:

The first part of the body, the second part of the body, and the third part of the body

132

The seven organs are generally the root, stem, middle of the body, limbs, neck, and head, and are branched from each of the seven living organisms

The five bodies united in relation to themselves

The members after she united

The root is united with the stem, the neck is united with the head, and the rest of the three organs of each organism

How the seven living organisms carry out the process of feeding, then growing in three stages, and then performing their three assigned functions

God Almighty created fully developed mountains from the beginning, with their roots extending deep into the body, the layer that has life on it in order to control its balance and hold it in its right place, and God created them fully developed from the beginning because there is no living organism before them that you can rely on to carry out the process of food and then growth

Water estate. The waters of the estate are considered the first food for all living creatures except the mountains, and they feed on it at frequent intervals

The first stage

From the stages of feeding, then the growth of the rest of the six living organisms, then carrying out their functions, and in this stage the six living organisms will grow by a third as a gift and mercy from God for the six living organisms, and humans generally feed in this stage on the fruits of the four living organisms, plants and reptiles, starting before they are cursed, and animals eat plants and birds eat them. Plants that are grown in the summer year and mature in the winter year. First, the seeds are placed in the soil of the body, the layer on which life is based Then they are irrigated and grow by a third, then the snakes breastfeed before they are cursed and grow by a third, then the animals breastfeed the young from their mothers and they grow by a third, then the birds eat their young and they grow by

135

a third, then the fish graze their young and eat them and they grow by a third, then the mothers breastfeed their young and they grow by a third

The second stage

Among the stages of growth of the body, the living organism, first note, we will discuss the matter of explaining and clarifying how reptiles grow before they are cursed when they used to eat plants and have legs, and not after God Almighty, the Almighty, cursed them, and they began to crawl on their stomachs, swallow meat, and do not chew it, and humans feed on it at this stage as well. The four living creatures Plants and reptiles, starting before they were

cursed, animals eat plants, and birds eat plants, are grown in the summer year and mature in the winter year First, the plants on land in general grow at a rate of one-third and one-third, and thus the plant for reptile food has grown, and after the plant for reptile food grows, the reptiles eat it and it grows at a rate

Secondly, the plants on land in general grow by one-third and two-thirds of a third, and thus the plant for the food of animals that eat plants, which represent two-thirds of the animals, grows, and after the plant for the food of animals that eat plants grows, the plant-eating animals eat it, and it grows by two-thirds, and after the plant-eating animals grow

By two-thirds, the animals that eat plants, which represent a third of the animals, eat part of the plant-eating animals, and they grow By

two-thirds, fourthly, the plants on land in general grow by two-thirds, and thus the plant for the food of the plant-eating birds grows, and after the plant for the food of the plant-eating birds grows, the birds eat it and it grows by two-thirds, and after the plant-eating birds grow by two-thirds, the bird-eating birds eat the plant-eating bird. Part of the plant-eating birds grow and grow by two-thirds, and at the end of the second stage of the growth of the four plant-eating organisms Before reptiles are cursed, and animals and birds eat plants until the stage of fruiting the fruits whose four living creatures grow in the summer year and mature in the winter year, the fruits of the creatures that grow in the winter year and bear fruit in the summer year have run out. At this particular time, the fish in the rivers and seas

are fully grown, as God made them fully developed at this time so that man could feed on them at this time when there are no fruits for this As for the winter year and in the summer year as well, at the end of the second stage of the growth of the four living organisms, plants and reptiles, before they are cursed, and the animals and birds eat the plants until the fruiting stage of the fruits that grow their four living organisms in the winter year and bear fruit in the summer year, the fruits of the organisms that grow in The summer year and it bears fruit in the winter year

At this particular time, the fish in the rivers and seas are fully developed, as God made them fully developed at this time so that man can

139

feed on them at this time when there are no fruits

The three stages of marine growth in bodies of water

First stage

Plants grow by a third, and the fish eat them, so they grow by a third, then the fish that eat the fish eat the plants, the fish eat the plants, so they grow by a third

The second stage

Plants grow by two-thirds

Then the plant-eating fish, which represents two-thirds of the fish, eat it and grow by two-thirds, then the plant-eating fish, which

140

represents a third of the fish, eat it and grow by two-thirds.

The third stage

Plants in bodies of water grow at a rate of three-thirds, and marine fish eat them, so they grow at a rate of three-thirds, and marine fish eat them, or fish eat fish that eat plants, so they grow at a rate of three-thirds

The third stage is for the body and the organism in general

Among the seven stages of nutrition and growth of living organisms that make up the body is the living organism on land. First, the

plants on land in general grow at a rate of two-thirds and one-third, and thus the plant for reptile food becomes. The third stage has grown, and after the plant for the food of reptiles grows in the third stage, the reptiles eat it and it grows in a ratio of three-thirds or in full. Secondly, the plants on land in general grow in a ratio of two-thirds and two-thirds of a third, and thus the plant for the food of animals that eat plants in the third stage has grown and after it has grown The plant for the food of reptiles grows in the third stage, and the reptiles eat it, so it grows in a ratio of three-thirds or in a complete ratio, secondly, the plants on land in general grow in a ratio of two-thirds and two-thirds, and thus the plant for the food of animals that eat plants in the third stage has grown, and after the plant for the

food of animals that eat plants grows in The third stage is eaten by plant-eating animals, so they grow in a ratio of three-thirds or in full proportion to growth, and after the plant-eating animals grow Which represents two-thirds of the animals in full, the animals that eat the plants for animal food become the animal eaters, the plant eaters that represent two-thirds of the animals have grown, and after the animals that eat the plants for animal food grow, the animal eaters eat the plants in full proportion, and the animals that eat the animals eat the plants, so they grow in a ratio of three-thirds or in full proportion

Thirdly, the plant grows on land at a rate of three-thirds or in full proportion, and thus the plant for bird food in the third stage has grown, and after the plant for bird food in the third

stage has grown, the birds eat it and it grows at a rate of three-thirds or in full proportion

After the plant-eating birds grow in full proportion, the plant-eating birds eat the plant-eating birds in the third stage, and they grow in a ratio of three-thirds or in full proportion

After the plants on land in general grow in a ratio of three-thirds or in full proportion, the fruits of the four living organisms mature, which are plants in general and reptiles before they are cursed, and the animals that eat plants and birds that eat plants, so humans eat them and grow in a ratio of three-thirds or in full proportion

144

A painting of how the body displays the living organism and the bodies emanating from it on the seventh human body in an organized manner for the seventh human body to use in performing its mission

For example, a person wants to do the task of eating soft meat, intermediate between animals and fish. He catches a bird and then eats it

The last panel is a panel describing the process of fruiting fruits in each of the seven living organisms and how they present the seventh component and benefit from it

After the fruits ripen for each of the six living organisms, the six living organisms present their fruits to the living organism, so the person chooses from them what suits his need, presents them to him, and takes them to carry out the seven tasks assigned to do their work

The living being body exists from one of the seven elements of its components, seven copies, and its fruits are that it has ten fruit carriers in each organ, and each carrier carries three fruits

146

The three stages of union of the seven components of the body, the organism, and the type of each union

The first stage

One of the stages of union in the body of a living organism is the stage of union of the living organism, mountains, with the living organism, plants, and this union is its kind. They are one fully developed organ in relation to the body of the living organism, and they are a body with each other in relation to themselves

The second stage

One of the stages of union is the stage of union of the living organism and animals, whether plant-eating animals or plant-eating animals, where plant-eating animals unite with reptiles that are originally united with the living organism, plants Related to the organism are mountains and animals, animal-eaters, plant-eaters that unite with birds, plant-eaters, and marine organisms, and plant-eating animals unite with the organism, snakes, by meeting them in one place, and this place is the place of food, which is food. Plants, as for animals that eat animals, plant-eaters, they unite with Birds eat plants by eating animals, plant-eaters reduce the number of plant-eating animals and then leave space Good green, from which birds eat plant-eating animals, and plant-eating animals unite with marine animals by pushing

humans away from plant-eating animals because they are savages, and if a person approaches animals, he eats the plants next to them, perhaps the plant-eating animals will kill him, and this pushes humans towards Marine animals, which also innately want to perform their function, which is for humans to eat them until the plants for their food grow Until the fruits ripen and in this way, the animals in general have united with three members, three living organisms, and the three living organisms are united with the rest of the seven living organisms, and the type of union here is a union whose goal is for the seven living organisms to become united with each other in order to eventually become one body called the organism body. Living

Third Union

It occurs after the third stage of nutrition, then the growth of the seven living organisms in the body, the living organism, which is between the marine organism and the human organism, after the end of the second stage of nutrition, then the growth of the living organisms that are in the body. The living organism does not exist, the human being is the plant for its food, which is the fruits of The four living organisms have matured, so they head towards the marine organisms in order to eat their fish. In this way, the human organism united with the organism The marine organism and the type of union here is a union until the two living organisms complement each other in the process of becoming a large, fully developed organ for the

150

body of the living organism and a complete body for themselves

The three functions, which are in three stages, for each of the six living organisms

First, the functions of the body and the living organism are the three mountains

Firstly, plants grow on a layer with a stable and balanced life. Secondly, the living organism, the mountains, at the same time, always and forever, guarantees the six living organisms that come after it in order to live on a stable and balanced land. Thirdly, the living organism, the mountains, provides seven human needs

Secondly, the living organism is plants

The function in the first stage is to provide snakes with their own food, and the function of the second stage is to provide animals, birds, and marine animals that eat plants, and the living organism in general has its own food and the rest of the organisms that follow it inArrangement: They feed on plant-eating organisms, and the function in the third stage is to provide what humans need through plants, which are seven needs

Third, the snake organism

Its function in the first stage is to absorb toxins from the atmosphere so that animals that eat plants can live in an atmosphere free of toxins and in clean, pure air that they breathe, and the function in the second stage is for all living organisms that are next in line to live in moderately pure air, and its function in the third stage is to provide humans with air. It is very clean and also provides six other things that humans need before they are cursed

Fourth, living organisms, animals, and plant eaters

Its function in the first stage is to eat animals, animal eaters, plant eaters, and its function in the second stage is to reduce the share of birds

in the process of eating plants in order to control the nutritional process in birds, and its function in the third stage is for it and the animal eaters, the plant eaters, to provide seven needs to humans

Fifth: Living organisms, animals, animal eaters, plant eaters

Its function in the first stage is that the plant-eating animals eat a large portion of the plant-eating animals, thus providing a good share of plants for the birds to eat. The second function is that it provides the plant-eating birds with fully-grown birds to eat and satisfy them. The function in the third stage is that it and the plant-eating animals provide Seven human needs

Sixth: Birds eat plants

Its function in the first stage is to eat birds, bird eaters, bird eaters, plant eaters, and its function in the second stage, with its beauty, paves the way for the beauty in the seas, including fish and marine things, and the third function is that birds in general provide seven needs that humans need

Seventh: Birds eat birds eat plants

The function in the first stage: First, the birds that eat the birds that eat the plants eat the birds that eat the plants, and after the birds eat

155

the birds that eat the birds that eat the plants. Plant-eating birds The level of plant-eating birds eating plants decreases, so that the plant provides the plant-eating animals with function in the second stage

It has the magnificence and prestige that the universe boasts, like animals that eat animals and eat plants

The function in the third stage is that it and the plant-eating birds provide seven human needs

Sixth: Fish and marine life

The function of marine life in the first stage is that throughout the period of nutrition and growth for the rest of the five living organisms on land, food is always available, or in the period the end of the second stage of nutrition and growth for the five living organisms on land for humans, so that the five living organisms give general comfort in The period of nutrition, growth, and performance of their functions towards the human organism, so all five living organisms achieve their functions towards the human organism and their function in The second and final stage is that it provides the human organism with three needs

Seventh: Man

All living organisms perform their functions in order to provide him with the necessary needs to carry out the work of the seven tasks assigned to him. As for his function towards the six living organisms, his function is to work for plant germination, raising birds and animals, reviving the living body in general, and building the earth Fourth body

The body has seven tasks that a person is assigned to do

As we explained before, the six organisms feed and grow in order to provide the human organism with all the needs it needs to carry out the work of the seven tasks assigned to carry out its work

First, the location of the body, the seven tasks that the living being is charged with, the human being, to carry out its work. Its location is with the human being, as it carries out its work and performance, and it is directly after the body, the living being, and the task of the body, the seven tasks that the human being is charged with carrying out its work, is the human ability to carry out the work of worship, as for the function of worship after it becomes A body for itself is the performance of worship and prayer

The seven components of the body. The seven tasks that a person is assigned to do are:

The first component is doing the basics of life task

The second component is carrying out the task of preventing diseases

The third component is doing the healing task

The fourth component is doing the luxury job

The fifth component is doing the work task

The sixth component is performing the task of performing the doctrine correctly

The seventh component is performing the task of worship

F- Description

160

The three stages of the process of bodies emerging and branching out from each other in the body are the seven tasks that a person is assigned to do

First stage

First, the three components that enable a human organism to carry out the work of the seven tasks assigned to carry out its work are:

Brain, body and talent

Secondly, the seven tasks that a person performs with the brain, body, and talent

161

Which represents the stage of a person trying to do their work, the stage of spiritual circumambulation around God Almighty

The first component is doing the basics of life task

The second component is carrying out the task of preventing diseases

The third component is doing the healing task

The fourth component is doing the luxury job

The fifth component is doing the work task

162

The sixth component is performing the task of performing the doctrine correctly

The seventh component is performing the task of worship

Thirdly, the stage of a person unifying the seven tasks, then the person makes each of the seven tasks a body for itself

A person actually performs the task of the basics of life, combined with it performing the task of preventing diseases

The second component is that the person actually performs the task of treatment

163

The third component is that the person actually performs the task of well-being

The fourth component is that a person actually performs the work task

The fifth component is that man actually performs the task of belief, united with it that man actually performs the task of worship

First, the three components that enable a living human being to carry out the work of the seven tasks he is assigned to do are the brain, body, and talent

The components that enable a person to carry out the work of the seven tasks he is assigned

to do are the brain, the body, and talent, and the function of the brain is an example of a person eating food. A message comes to the brain through the sense of sight and smell that there is delicious food in front of him, then a message comes to the brain through the sense of the stomach in the abdomen that he is hungry, so the brain does it. Immediately, by giving orders to the senses of the body with which a person eats, to start eating and eat, and we notice here that messages come to the brain From some of the body's senses, and on the basis of them, the brain gives orders to some of the body's senses to do something according to the brain's command, based on the messages that came to it from the other senses, secondly, the body's function is to give the brain messages and then take messages

from it to implement them. Thirdly, talent differs from one person to another, which is the human style in Walking, eating, working or moving

Secondly, the seven tasks that a person performs with the brain, body, and talent

Which represents the stage of a person trying to do their work, the stage of circumambulating the worship of God Almighty and then reaching the worship of God, and at the same time circumambulating God Almighty, but due to the greatness of God Almighty, we cannot reach Him

The seven tasks that a person performs with the brain and body are talent, and they represent, as we said, the stage of the spiritual circumambulation around God Almighty

Carrying out the work of the basics of life task. The one who carries out the work of the basics of life task is the person who lives in fertile lands next to rivers, as the fertile lands next to rivers contain two-thirds of the requirements that a person needs to carry out the work of the basics of life task, and the remaining third is a third of it on land, i.e. desert and forests, and the second third in Bodies of water and the third third in areas between land and bodies of water The description of a person doing the basics of life task is that A person performs the task of barely getting what satisfies him, barely getting what he enjoys, and barely getting what

he heals, and if he is seriously ill or otherwise and the need for treatment, medicine, and luxury is great, he obtains large quantities of living organisms found in forests, deserts, bodies of water, and areas that Between land and bodies of water, by getting to know the desert, forests, bodies of water, and areas between land and bodies of water when a person By performing the task of the basics of life, he thus paves the way for performing three functions, one of which paves the way for the next task, which is the task of preventing diseases, paves the way for performing the work of general tasks, and paves the way for carrying out the work of the basic task, which is the task of worship

The second component: Carrying out the task of preventing diseases: First, describing disease prevention is for a person to carry out the task of preventing diseases, which is to avoid the things that bring diseases and to protect himself from diseases, and when a person performs the task of preventing diseases, he thus paves the way for himself by performing three functions, which are: First, he paves the way. To heal himself from mild or few diseases that will afflict him, because he protected himself from many diseases and did not afflict him with any diseases Except for a little, secondly, it paves the way for the rest of the body's tasks, and thirdly, with this prevention, it strengthens worship

The third component: Carrying out the task of treatment First, describing the task of treatment Treatment is for a person to return to some living organisms that have healing, such as living organisms in the desert, in order to treat himself with them from any disease that afflicts him. Two-thirds of the requirements for treatment are in the desert, and the remaining third is one-third in the land, that is, the fertile lands that On the banks of rivers and forests, the second third is in the frozen areas between the land and bodies of water, and the third third is in the bodies of water and when A person is a healer and healer, and thus he paves the way for performing three functions: first, he can entertain himself, second, he performs the

body's general tasks, and third, he performs the task of worship

The fourth component: Carrying out the task of preparing luxury, luxury: Man performing the task of luxury is to entertain himself with living creatures that help with luxury, such as beautiful birds, beautiful birds, the sounds of beautiful birds, and beautiful living creatures that are designated for decoration and luxury supplies, two-thirds of which are in the forests, and the remaining third is one-third on land, that is, the fertile lands that On the banks of rivers and deserts, the second third is in the frozen areas between the land and bodies of water, and the third third is in the bodies of water Luxury gives him more morale and joy so that he can make an effort after that, and it

gives him positive energy for work. When a person performs the task of luxury, he thus paves the way for doing three jobs. The first job is that doing it paves the way for doing the work of the work task that follows it. Secondly, it helps him to do the seven tasks in general, thirdly, it comes to him. Positive energy to carry out the task of worship

The fifth component: Doing the work of the work task. First, describing the person doing the work task. The person does the work task until First, describing a person performing the task of work. A person performs the task of work in order to provide himself with everything he needs in terms of industries that help him in life in general, such as sleeping, drinking water, etc., and a person performing

the task of work paves the way for performing the work of three functions, which firstly paves the way for performing the work of the two tasks united in belief and worship through The construction of the entire earth in order to pave the way for worship in a correct manner, secondly, it paves the way for the body in general by means that work provides all The things necessary to carry out the work of four tasks that we mentioned, thirdly, the construction of things related to holy worship

The sixth component: Carrying out the work of the mission of belief, describing the belief, example of prayer, O God, I will obey You and carry out the work of work, performing the prayer of the third third of the night mee qat until I reach my goal, which is your satisfaction

with me, O God, O Lord of the Worlds, in this way the belief is applied with all aspects of faith and religion, and the belief represents the beginning of worship and the person's work. Doing the task of belief paves the way for a person to perform three tasks: first, it paves the way for performing the task of worship, and second, it connects the tasks. The five and the third worship determines the worship that you will perform, why you will perform it, and when you will perform it.

The seventh component: Carrying out the work of worship, description of worship, worship, worship of God alone, with no partner, God Almighty said, "And I did not create the jinn and mankind except to worship Him, and the only goal of the existence of man and the jinn on

earth is to worship God, and the goal of worshiping God is to unite God, so the only goal of man and the jinn is to worship God." On the face of the earth, it is the monotheism of God, Glory be to Him, the Almighty, the Almighty, and the testimony that there is no god but God alone, with no partner

The Messenger of God, may God bless him and grant him peace, said

The word "There is no god but God", for which the heavens and the earth were created

So everything we do is nothing but a prelude to worship, the prayer in which, after getting up from bowing, we bear witness that there is no god but God. In this book, we explain the matter of paving the way for worship, then worship, then what is meant by worship is

175

testimony that there is no god but God in an organized manner

Third, the stage of a person actually performing the five tasks he is assigned to do after the first two components and the other two components unite and make each task a body for itself

A person actually performs the task of the basics of life, combined with it performing the task of preventing diseases

176

The second component is that the person actually performs the task of treatment

The third component is that the person actually performs the task of well-being

The fourth component is that a person actually performs the work task

The fifth component is that man actually performs the task of belief, united with it that man actually performs the task of worship

Explaining and clarifying the five tasks that a person has already done and then achieved his goal of doing their work, which is worshiping God Almighty by performing prayer

In this third stage, the person has already performed the five tasks assigned to him after the first two components and the other two components have united in them

The second stage

The three components of bodies in relation to themselves that a person offers in order to be able to achieve worship or prayer are treatment and treatment, secondly, luxury and work, and thirdly, belief and worship

Secondly, the seven tasks that a person is assigned to do

The first body for itself is the body. The human being performs the task of the basics of life united with the task of preventing diseases so that they can carry out each other, but when

178

they become bodies for themselves, each one remains composed of seven tasks separately

Life basics

The first component is sleeping on modest beds whose mattresses and pillows are covered with wool from riverland animals and lined with cotton

The second component of drinking is drinking single river water and drinking animal milk

And some herbs

The third component is a modest place to relieve oneself

179

The fourth ingredient is eaten first, including vegetables, meat from river land livestock, and some fruits

The fifth component is a modest means of transportation, which is the donkey

The sixth component is wearing clothes made from the wool of animals raised in the environment and from their skins, and underwear made from cotton grown in the same environment and from forest animal wells

The seventh component: The house and the house have mud-brick walls, doors and windows consisting of two panels, an iron panel and a wood panel

Your opinions are made of wood and iron

The floors are made of forest marble and the utensils are made of copper and aluminum

The second body plate in relation to itself, which is the body. A person performs the task of protecting himself from diseases

The first component is to shower before bed, then wear clean clothes to sleep, then sleep on clean furniture

The second component is that the drinks must be clean and drunk in clean containers

The third component is that the bathrooms for relieving oneself must be clean and cleaned after each relieving oneself

The fourth component is to eat clean food in clean utensils

The fifth component is to pay attention to the cleanliness of means of transportation, whether modern or traditional, such as horses, donkeys, and camels
The sixth component is to wear clean clothes and shower before wearing them

182

The seventh component is to clean the house in which you live on a daily basis

The painting of the second body in relation to itself, which is the body, is a person performing the task of treating diseases

The first task is the task of treatment using desert herbs

The second mission is the mission of treatment through dairy cattle in the desert

The third task is the task of treatment through the severity of the temperature in

183

Desert and removing toxins from the body in the form of sweat

The fourth task is the task of treatment by eating the meat of desert cattle and drinking their broth

The sixth task is treatment by eating fish in the seas

The seventh task is the task of treatment by eating vegetables in fertile lands next to rivers, by eating forest fruits, and by eating amphibians in lands between land and bodies of water, or by extracting treatment from them

The painting of the third body in relation to itself, which is the body, is a person performing the task of well-being

The first component is luxury in a beautiful place to sleep, the fabrics of his bed are made of animal fur, which is in the frozen northern plot of land

The second component is the luxury of drinking, such as fruit juices in the forests and hot drinks, stimulants such as tea, coffee, and dairy from riverland animals

185

The third component is the luxury of eating by eating the meat of forest animals such as deer and by eating fruits in the forests

The fourth component is the luxury of seeing and hearing beautiful living creatures such as birds, animals, forests, deserts, and fertile lands next to rivers and areas between land and bodies of water, as well as seeing ornamental plants in forests, deserts, fertile lands, and areas between land and bodies of water, as well as seeing sea fish for luxury and decoration

The fifth component is luxury in means of transportation

The sixth component is the luxury of clothing by manufacturing and spinning animal fur in cold areas and from animal fur

Which is in the frozen northern piece of land, from the skins of animals in the desert, and the jewelry must be made of precious stones and precious metals such as gold and silver

The seventh component is luxury through the house or shelter, firstly, the external and internal walls are cut with stones from the mountains of colored stones in the forests, secondly, the doors are two parallel layers, the external one is made of iron and the internal one is made of wood. The internal one is closed during the day and the external one is opened, but at night the external and internal ones are

closed to prevent thieves from entering the house, thirdly, the windows are made of Three parallel layers, the first from the inside is made of glass protruded with wood, the middle is made of iron, and the iron wire nets are made to prevent the entry of thieves and insects And the first of The exterior is made of decorated wood. Fourthly, the floor is made of marble cut from mountains of colored stones and covered with carpets made from the fur of animals that live in cold areas. Fifthly, the furniture is made of wood, and the part on which a person is carried is made of iron lined with cotton and decorated with jewelry and silver, whether furniture for sleeping or sitting. Sixthly, the floor structure of the house is made of Iron and concrete, the number of floors is seven, seventh, drinking and eating utensils are made

of aluminum and gold, and their hands are made of wood. Eighth: Bathrooms are of two types: one that cleans Always to relieve yourself and another type to shower and enjoy the water

Secondly, the fourth body plate in relation to itself, which is the body, is the human being performing the task of work

First, define the work task

The task of work is the task of each manufacturer specializing in an industry in a specific field to create everything that a person needs to do the work of the seven tasks assigned to do their work, in which each task

189

consists of seven tasks that the person performs in seven stages

These seven tasks, as we mentioned, are:

The task of doing the basics of life task

The task of carrying out the task of preventing diseases

The task of carrying out the task of treatment

The task of doing the job of well-being

Task to do the job task

The task of performing the task of performing the doctrine correctly

Worship mission

The task of doing the task of worship

V.V.

Sixth, united with seventh,
the task of man performing the task of belief,
united with the task of worship

The first task is doctrine, this is how we apply it

Oh God, I will obey you and do such and such until I reach what I want and you are satisfied with me, O God, O owner of the command and prohibition three times

The second task: Worship: Purity: Purity must be achieved by washing if you are in a state of ritual impurity and by performing ablution when you pray. Complete purity is obligatory before performing any act of worship, and worship: Purity through ablution is achieved in this way, which is washing the hands three times, then washing the arms up to the elbows three times, then washing the mouth from the inside by rinsing the mouth three times, then

washing the nose. From the inside by inhaling three times, then washing the face three times, then washing the ears from the inside three times, then wiping over The head from the middle only three times, then wash the neck three times, then wash the legs up to the heels three times

The Messenger of God, may God bless him and grant him peace, used to recommend the Witr prayer during ablution

The third task of worship is seeking forgiveness: The sin of a righteous Muslim is forgiven after he asks forgiveness for each sin three times

The fourth task of worship is reading the Qur'an, reading the Qur'an correctly in this way, which is reading the surah that you want to read very carefully and three times during one day. Thus, you have read the surah that you want to read during the day

The fifth task of worship is supplication first, in order for the supplication to be accepted by the supplicant, it must have three conditions: first, that the supplication be legitimate, second, that you choose a time in which the supplication is answered, such as the time of night prayer, the morning time, Friday, and the end of Ramadan, and third, that you say the supplication three times, and in this way the

supplication will be accepted for you. God willing

The Messenger of God, may God bless him and grant him peace, said

God descends to the lowest heaven in the last third of the night and says, "Is there a need, so respond to him?" Is there anyone who asks for forgiveness, so forgive him

The sixth task, the takbir, is united with the seventh task, worship, the goal of the takbir is to destroy the accursed Satan, but we implement it in a correct way. We implement it in this way. We are satisfied with the takbir during prayer and at the time specified for worship, which is the time of the first third of the miqat at night, and it is said that the takbir

in prayer is said five times, and away from prayer three times, it is in The original is said twice, but when we say it outside of prayer and without adhering to the five pillars of prayer, we say it three times, meaning we add more to it The original is one-third, taking into account human error

The seventh task: Worship: Prayer and
Worship: Prayer is the one in which we achieve the only goal of man and the jinn, which is the monotheism of God Almighty, and it is only a carrier of monotheism and does not help in performing monotheism in an organized manner

E- The third stage

The three components

Left to scientists

The seven tasks

197

Each of these five tasks is done by performing seven tasks within its space or within its framework, and these seven tasks in each of the five tasks are: First. We explain the main tasks

A person actually performs the task of the basics of life, combined with it performing the task of preventing diseases

The second component is that the person actually performs the task of treatment

The third component is that the person actually performs the task of well-being

198

The fourth component is that a person actually performs the work task

The fifth component is that man actually performs the task of belief, united with it that man actually performs the task of worship

Then it became a body for itself after it was fully equipped, as we will take from every five tasks for each main task an important one and explain it. The seven tasks that make it up

199

First, the task of the basics of life, which we will take as an example, is the task of doing sleep work

In order to perform the task of sleeping, we organize seven things next to each other:

The first component is the server on which we sleep

The second component is ranked

The third component is the pillow

Fourth component blanket

The fifth component is a light source

The sixth component is a window for air entry

The seventh component is something made for ventilation, such as a fan

Secondly, the task of carrying out the task of preventing diseases, and we will take the example of preventing diseases that are in food

In order to protect ourselves from diseases caused by eating, we do this in these stages, the first stage is that it is planted correctly

201

The second stage is that it is shipped to the vegetable seller in a good manner

The third stage is for the vegetable seller to keep it in warehouses with good ventilation

The fourth stage is to purify the vegetables when we buy them The fifth stage is to wash the vegetables well

The sixth stage is washing the utensils required for eating well

The seventh stage is to cook food properly and correctly

Third, treatment: We will take an example from the task of treatment, which is the task of treatment with herbs

In order to treat a person with herbs, we go through seven stages, the first stage is to plant herbs in the desert under the care of an agricultural engineer

The second stage is to ship the herbs to herbal medicine pharmacies in a good manner

The third stage is that the pharmacy preserves it well

203

The fourth stage is to purify it when we buy it

The fifth stage is to wash it well

The sixth stage is to wash all its utensils well

The seventh stage is to wash it and cook it well

Fourth, if a person performs the task of well-being, we will take, for example, a person performing the task of well-being related to fluids, such as drinking cow's milk

In order to carry out the task of drinking cow's milk as a luxury, we must go through seven stages:

The first stage is providing the necessary food for the cow

The second stage is washing the utensils in which we will milk the milk

The third stage is washing Durrat Al-Baqarah

The fourth stage is milking the cow

205

The fifth stage is shipping milk in carts with refrigerators

The sixth stage: Shops keep milk in refrigerators

The seventh stage is buying milk, then we ship it in clean containers, and thus the milk and the luxury of drinking milk are ready

Fifthly, a person performs the task of work, and we will take an example from the task of work, which is working to build a house

In order to build a house, we must take seven steps:

The first stage is drawing the shape of the house on paper

The second stage: We draw the shape of the house on the ground

The third stage: We dig at the place where the house is drawn on the ground

The fourth stage: We determine the raw materials required to build the house

The fifth stage: We buy raw materials from places where they are sold

The sixth stage: We adjust the raw materials so that they are 100% suitable for the house drawing

The seventh stage: We put the raw materials on the drawing of the house and then build the house

Sixth and seventh are the two tasks that unite to become a complete body in relation to themselves, which are belief and worship, we will take an example from worship, which is worship by reading the Holy Qur'an

The Holy Qur'an consists of seven types of verses or seven stages, the first stage is the

stage of describing Hell, the second stage is the stage of a threat to the unbelievers of torment in Hell, the third stage is describing Paradise, the fourth stage is preaching Paradise to the righteous, the fifth stage is enjoining good deeds, the sixth stage is forbidding corrupt deeds, the seventh stage is stories about the first two

The five bodies for themselves united the five united tasks

Then the seven tasks in which a person unites the first two tasks and the other two tasks, so they become five tasks

A painting of how the body displays the seven tasks and their fruits on the seventh body, the worshiping person, in an organized manner for the seventh body, the worshiping person, to use in performing his mission of worship

First, the body presents the seven tasks that a person has performed to the person who worships the tasks, and chooses from them what suits him in order to perform his task, which is worship

There is a note that in order for a person to perform any of the seven tasks, he must prepare to do them by two-thirds, and then after that he performs the task 100% perfectly in order to perform the task correctly, and if he does not master the task in any percentage less than 100%, he will fail. Performing the task and we will not get its fruits

God Almighty said that God loves that if one of you does a job, he does it well.

The last painting is a painting describing the process of bearing fruit for a person in every task he performs in order to carry out the seventh task, which is the task of worship

After a person performs every task, he reaps the fruits that enable him to reap the final fruit, which is worship, then the testimony that there is no god but God alone, with no partner

For every task that a person performs successfully, he obtains thirty fruits that help him reap the final fruits, which are the fruits of worship

The seven-tasking body has seven copies of each of its seven components, and its fruits are that it has ten fruit carriers in each organ, and

211

each carrier carries three fruits, and we should not forget that each organ has seven copies

The seven components of each component mean here that the person who performs the seven tasks is divided into seven types in terms of genetic genes

When a person reaps the fruits of the six tasks in order to reap the last fruit, which is monotheism, he does not offer monotheism except to God Almighty, and this is out of God's honor for man

The fifth and final body is the galactic body

General condition of the galactic body

The galactic body is considered one of the fully grown bodies from the beginning, as it is not nourished in order to grow or grow, and the circumambulation of its six components around its nucleus represents the spiritual circumambulation for him or for him, and it is not strengthened or based on circumambulating fruits from another body, nor does it produce fruits to give to a body after it while it is in isolation and not There is a body after him

Location of galaxy objects

Galactic bodies are located at vertical distances, very far from the body, the layer on which we live, to the point that the distances between them and the surface of the Earth are estimated in light years, and the size of the galactic bodies is so large that the distances between them and each other are estimated in light years, and after God created the body, the Earth, then Above it is the body, the layer on which there is life. Then the body created the living being to live on, then man was assigned to carry out the work of the body, the seven tasks The creation of galaxy bodies and galaxy bodies is very large in number, exceeding a billion galaxies, and their size is so large that

214

the distance between each galaxy and a galaxy is estimated at light years, and the galaxies are located at very long distances from the body.

The layer on which the life we live is estimated at light years

C Describe the three stages of the process of bodies emerging and branching out from each other in the galactic body

First stage

The three components are

The nucleus and body of the galaxy and the talent or galactic style of circumnavigation

215

The seven components of the galactic body that perform the three components and the function of each component

The galaxy is a chi-body, one of the bodies we have explained, consisting of seven components, in order from beginning to end

The first component is the gravitational component, whose function is to hold the galactic body in its correct place

The second component is the gas component, whose function is to give the galactic body inertness that weighs heavily to stabilize it in the correct place where gravity has fixed it

The third component: Asteroids are the attractive place that contains waste in the galactic body, such as meteorites and meteors

The fourth component is the middle component of the body, whose function is to connect most of the components of the galactic body to it, and its basic condition is that it is the fruit of the solar clusters, but it moved from its original place, which is the middle of the body, to the most cultivated place, so that God Almighty, the Almighty, sent with this move a spiritual message, which is that God Almighty, the Almighty, made the body The galaxy takes the fruits out of the middle of the galaxy's body

217

and places them on its arm until it gives them to man

The fifth component is the agricultural component, whose function is to carry the solar systems on top of it and then present them to humans as a spiritual message

The sixth component is the black hole, whose function is to connect the nucleus component to the middle component of the body, as well as give it flexibility

The seventh component is the nucleus component, for which all the components before it work. The function of the nucleus

component is to control all the components of the galactic body, since if the nucleus component rotates, all the components around it rotate with it

Note: There is no matter in the galactic body that there are seven forms of each component, such as the law that applies to Earth, but rather that there is no other component of its kind

How the components of the galactic body combine until they become five fully large components in relation to the galaxy and five bodies in relation to themselves

Since the galactic body does not feed to grow and does not have stages of growth and union, its organs are united from the beginning, meaning that the last state that the organism

reaches The living thing, after completing its growth, has reached it since God Almighty created it, and in the galactic body, two components unite with each other in the beginning and two components with each other in the end. The two components that unite with each other in the beginning are the gravitational component and the gas component, and they unite with each other with the aim of stabilizing The galactic body is in its correct place and gives it lethargy and heaviness to anchor in the correct place that we mentioned, and thus the two components become fully developed components As for the galactic body and one body in relation to themselves, the two components that unite with each other in the end are the black hole component and the nucleus component, which

is their union with each other with the aim of being able to control the entire galaxy and with the aim of completing each other until they become a complete body in relation to themselves, and thus the galactic body became It consists of five components that are completely large in relation to the galactic body and five bodies in relation to themselves

The second stage

The third stage

The galactic body performs a process called the process of spiritual circumambulation

This process is carried out seven times each cycle and in this way, as the nucleus

component that controls the five components of the body rotates, the galaxy, which starts from the gravitational component to the agricultural component, through its connection to the five components that we mentioned through the black hole component, and the circumambulation is a spiritual work carried out by every living being, and the reason is It is that the living being loves God Almighty, and whoever loves something loves very much to reach it In order to reach it first, he circumambulates around it, but due to the majesty of the greatness of God Almighty, when a living being circumambulates around it, it does not reach it, and due to the intensity of the love of a living or non-living being for God Almighty, the Almighty, the Almighty, he continues to circumambulate around God

222

Almighty, the Almighty, the Almighty, even if he does not reach it. To him, it is enough honor for him that he circumambulated around God Almighty, the Almighty, the Almighty, just to reach him

Third, the part on important elements explained in detail

Study the description of all human races correctly

Introduction

God Almighty, the Almighty, the Almighty, created our master Adam, peace be upon him, from three types of plots of land of the class on which there is life, that is, three types of its clay, which are hot forests, including Negroes, and a mixture of desert and cold forests, including the Arab Caucasus, the Roman Caucasus, and the land adjacent to the rivers, including Yellow Mongols

These four dynasties, as we mentioned, are the descendants of our master Adam, peace be

upon him, and these four dynasties must get to know each other in a correct way so that the sons of Adam can carry out the tasks they are assigned to do, and getting to know each other in a correct way between these dynasties is in this way, which is for a third of the yellow Mongolian males to marry Roman women, and a third of the Arab males to marry Roman women and a third of the Negro males to Arab women

In this way, we find ourselves facing three new breeds in addition to the four breeds that we mentioned, so the seven breeds are

1-mongolian yellow

2- The mating offspring of a third of yellow Mongolian males from Roman women

3-rum

225

4- The mating offspring of a third of Arab males to Roman women and a third

5-arabs

6- The mating offspring of a third of male Negroes from Arab women

7- Negroes

We will discuss three things in each of these breeds:

Describe the shape of each breed

Describe the places suitable for them and where they live

Suitable work for every breed

First, the Negro breed is shaped as follows

Their skin is black – they are tall – their bones are strong – their mouths, eyes, noses, ears are wide, and their head hair is thin

Their intelligence is normal and they live in hot forests

The appropriate work for them is to take raw materials in the forests from the stems and branches of trees and mountain stones and hand them over to the mating offspring of a third of the black male Arab women

Secondly, the lineage of mating a third of male Negroes with Arab women

Their skin is between black and brown, – they are tall, –their bones are strong - their mouths, eyes, noses, and ears are wide, but less wide than the Negroes, their hair is moderately thick, and their intelligence is higher than the

Negroes, and they live on the outskirts of hot forests, and the appropriate work for them is to cut the raw materials that they receive from the Negroes in a preliminary cut, then hand them over to the Arabs

Third, the Arab dynasty

Their skin is brown, – they are of medium length, their bones are moderately strong - their mouths, eyes, noses, and ears are of medium width, –their hair is abundant, soft, and black in color, and their intelligence is of a higher degree than that of a lineage that mates a third of male Negroes from Arab women, and they live in the desert

The appropriate work for them is to transform the raw materials into pieces ready for installation in the appropriate place

Fourth, the offspring of a third of Arab males mating with Roman women

The skin is brown and tends to be white – slightly longer than the Arabs – Their bones are of medium strength - their mouths, eyes, noses and ears are of medium width – Their head hair is abundant, soft and colorful, and their intelligence is of a higher degree than that of the Arabs, and they live in cold forests

The appropriate work for them is to receive raw materials from the Arabs and place them in the correct places designated for them by the Roman dynasty

Fifthly, the Romans

Their skin is beautiful and reddish-white – They are taller in stature than the mating offspring of

a third of the Arab males than the Roman women - their bones are not strong but normal – Their mouths, eyes, noses and ears are of various shapes and their goal is to be beautiful and they tend to expand - and their hair is abundant, soft and colorful and their intelligence is higher than the mating offspring of a third of the Arab males From the Roman women who live in cold forests - the appropriate work for them is to draw the design and shape of the things we need in life
General

Sixth

The mating offspring of a third of the yellow Mongolian males are Roman women

Their skin is beautiful and reddish-white – they are less tall in stature than the Romans - their

bones are not strong but normal – their mouths, eyes, noses and ears are diverse in shape and their goal is to be beautiful and they tend to expand - their hair is abundant, soft and colorful and their intelligence is higher than the Romans and they live in cold forests and the work is appropriate for them. It is for them to become a link between the yellow Mongols and the Romans, so that they place the designs they take from the Romans in the right place Which is chosen by the yellow Mongol dynasty

Seventh

Yellow Mongolian

Their skin is white but not red – They are short in stature – Their bones are normal - their mouths, eyes, noses and ears are narrow – Their head hair is abundant and black in color

231

They are the highest degree of intelligence and acumen of all breeds and they live in cold areas and the appropriate work for them is to be the leaders of all breeds at work and in everything

Study the ideal life for a person

First, concepts

The day consists of three times:

The first miqat is the morning miqat, the second miqat is the daytime miqat, and the third miqat is the night miqat, and the morning miqat represents

20% of the day, and the daytime miqat represents 45% of the day, and the night miqat represents 35% of the day, and each miqat consists of three-thirds, except for the morning miqat

We start the explanation

First, every Saturday during the morning meeqat, a person makes this call three times, which is: O God, O One, O Owner of all things, O One, I have no way to reach My provision

except Your path. Give me all of My provision during this week in which I call upon You in all)

A person wakes up from his sleep at the beginning of the morning meeqat, then the morning meeqat begins by reciting Surat Al-Nas, Al-Falaq, Al-Ikhlās, Al-Masad, Al-Nasr, Al-Kafirun, and Al-Fatihah in the same order twice, once at dawn during the morning meeqat and once at night at the beginning of the first third of the night meeqat, that is, after the color of the sky becomes dark black, and these surahs are recited during These two meeqats are three times, meaning we recite Surat Al-Nas three times, then we recite Surat Al-Falaq three times, and so on until completion Of the seven surahs, and that is so that he is protected from Satan and his helpers from the devils of mankind and the jinn during the entire day. If a

person misses the time to recite the surahs, whether in the morning or in the first third of the miqat at night, there is no objection to reciting the surahs that are recited in the morning whenever you remember and whenever you can during the miqat during the day

Reciting the surahs that are recited in the first third of the night miqat whenever you remember or whenever you can at the night miqat

Then he performs the worship of the takbir three times, meaning he says, "God is great", three times, and this is so that we may be protected from the devils of the jinn during the morning meeqaat, united with the first third of the meeqaat during the entire day

A person performs the work of worship, the takbir, as we described it, at the morning meeqat at the beginning of every third of the three meeqats of night and day, and it is five after they have united, that is, before starting the first act of worship that paves the way for carrying out the work of worship, prayer, and this is to protect the person from Ibis and his helpers from the devils of the jinn in every third of Three times the meeqat is night and day, and in the meeqat or third of the morning as well

If a person misses the time to say "Allahu Akbar", which is at the beginning of every third, then there is no objection to doing the work of worship, saying "Allahu Akbar" whenever you remember or whenever you are able

Then he eats a meal of forest creatures, which is fruit and the meat of birds and forest livestock, then drinks a cup of coffee or tea to make it superior, then prays the dawn prayer

Then he praises God and asks for forgiveness until the beginning of the first third of the day

Nb

The morning begins when the sky turns from black to dark blue, then the dark blue color begins to lighten little by little until it becomes

237

light blue, and the end of the morning meeqat is sunrise, so what is required is that the prayers and memorials be memorized specifically on this morning that we have described

Nb

Then he enjoys the natural luxury of the miqat during the day, which is watching and hearing ornamental birds and seeing ornamental plants, and this is in the gardens until the beginning of the second third of the miqat during the day, then he eats the meal of dry creatures that are on the banks of the river, which are vegetables and meat of birds and livestock of the land, then he prays the prayer of the second third of the miqat during the day,

then He rests until the beginning of the third third of the day, then he eats the meal of desert creatures, which is fruit and meat of cattle and desert birds, then he drinks herbs Then he prays the prayer of the third third of the miqat during the day, then he goes to work to work until the beginning of the first third of the miqat at night, then he eats seafood, then he prays the prayer of the first third of the miqat at night, then he worships God until the beginning of the second third of the miqat at night in two ways. The first and most important is that we worship like the five acts of worship, and the second is that we say acts of worship and what we say inside the prayer and its multiples away from the prayer, then he prays the prayer of the second third united With the third third of the miqat at night, then he

239

prepares for tomorrow, then drinks a cup of milk, then sleeps until the beginning of the miqat in the morning, and so on every day

Body parts per month and the like

First, the organ in the month is the day, and the organ and the day are two pairs, that is, the organ is Saturday, consisting of two Saturdays every Saturday in a week, that is, two weeks

Saturday & Root - Sunday & Hip - Monday & Butt - Tuesday & Body

-Wednesday & Limbs - Thursday & Neck - Friday & Head.

Study worship in detail

The body, in relation to itself, consists of seven acts of worship, as we mentioned:

1- Worship is belief 2- Worship is purity 3-
Worship is seeking forgiveness 4- Worship is

241

reading the Qur'an 5- Worship is supplication 6-
Worship is takbir 7- Worship is prayer

These acts of worship are a body for
themselves, each body consisting of seven acts
of worship as well. Here are the seven acts of
worship that make up each body

1-worship is belief

The doctrine of purity –The doctrine of seeking
forgiveness - The doctrine of reading the
Qur'an - The doctrine of supplication - The
doctrine of takbir –The doctrine of prayer – The
doctrine of performing today's tasks

2-purity worship

Purity of the seven different types of body
organs

3- Worship is seeking forgiveness

Asking forgiveness for negligence in the right of God – Asking forgiveness for negligence in the right of our master and Prophet Muhammad, may God bless him and grant him peace –

Asking forgiveness for negligence in the right of parents – Asking forgiveness for negligence in the right of your brothers – Asking forgiveness for negligence in the right of relatives and relatives – Asking forgiveness for negligence in the right of people Far from us – Asking forgiveness for negligence in the right of the poor and needy

4- Worship is reading the Qur'an

Verses enjoining good – verses forbidding evil – verses preaching Paradise – verses threatening

243

torment – verses stories – verses praising the righteous –verses condemning the corrupt

5- Worship and supplication

A prayer to destroy most of the corrupt –A prayer to protect against most of the corrupt and most of the evil – A prayer to forgive all sins - A prayer to bring the most good – A prayer to secure oneself to the maximum degree permitted by God – A prayer to master religion to the maximum degree permitted by God – A prayer to enter the highest levels of Paradise

6-worship is takbir

Takbir generally destroys the corrupt in the jinn

And its types are

A cure for the corrupt jinn

– and before reciting Al-Fatihah in prayer - and before bowing in which we praise God – and before getting up from bowing to bear witness that there is no god but God –and before prostrating to thank God for the blessing of monotheism - and before concluding the prayer with prayers and peace be upon our master Muhammad

There is no objection to performing the act of worship by saying "Allahu Akbar" in any other place to attack the corrupt jinn

7-worship and prayer

Takbir – Reciting Al-Fatihah – Kneeling and saying Glory be to God – Standing from bowing and saying I bear witness that there is no god but God –Prostration and saying Praise be to

God –Standing from prostration and concluding with prayers and peace be upon the Messenger of God – Peace be upon the right and the left

Note: Worship: Prayer consists of two rak'ahs in the manner that we have explained, but the fruits of the body are all worship, meaning that they are the only bearer of the fruits of the body. Worship, and the total number of bearers of fruits for any body in relation to itself is ten bearers of fruits, so worship is prayer as a bearer of fruits, numbering ten rak'ahs, and a person performs them as two rak'ahs at the beginning of every third of the three days. The five after their union and the fruits that one rak'ah of prayer bears are Glory be to God in bowing, then I bear witness that no There is no god but God after getting up from bowing, and praise be to God in prostration

When a Muslim person performs acts of worship in general and the fruits of worship, he performs them in this way. First, acts of worship are performed three times, and fruits are performed six times during prayer, and there is no objection to us saying their multiples

But outside prayer and not inside prayer, inside prayer a person says acts of worship or the fruits of worship in the number we mentioned without increase or decrease

The explanation for this is that the person who performs the task of worship and the task of the fruits of worship consists of two identical halves, meaning that the basic principle is that he performs the work of worship twice, once for each of the two identical halves, and the third time is according to the rule that a person

cannot do the work completely correctly, so we provide the number of times to work.

Approximately a third of the number of times, and here we will increase one, so worship has become three times, and each worship consists of one element and more. It is identical, but the fruits are identical, so they are treated as two, not one, so they are said six times.

The appropriate number of rak'ahs for a person is two rak'ahs because, as we explained, it is made up of two identical halves, so what is appropriate is two rak'ahs as an original number, and we add one rak'ah to the two rak'ahs due to human error.

Explaining and clarifying the entire matter of prayer

Firstly, the number of prayers, secondly, the time of each prayer, thirdly, the number of rak'ahs of each prayer, firstly, the number of prayers is five prayers, secondly, the time of each prayer

The dawn prayer or the morning meeqat is united with the first third of the day's meeqat, its time is at the beginning of the morning meeqat, and the number of its rak'ahs is two rak'ahs and one rak'ah is separate, secondly, the prayer of the second third of the day's meeqat, its time is at the beginning of the

second third of the day's meeqat, and the number of its rak'ahs is two rak'ahs and one rak'ah is separate, thirdly, the prayer of the third and final third of the day's meeqat, and its time is At the beginning of the third and final third of the day's meeqat, the number of its rak'ahs is two rak'ahs and one rak'ah is separate, fourthly, the prayer of the first third of the meeqat of the day, and the number of its rak'ahs is two rak'ahs and one rak'ah is separate, fourthly, the prayer of the first third of the meeqat of the day The night and its time at the beginning of the first third of the night miqat and the number of its rak'ahs are two rak'ahs and a single rak'ah Fifthly, the second third prayer is combined with the third third of the night miqat and its time is at the beginning of the second third of the night miqat and the

250

number of its rak'ahs is two rak'ahs and a single rak'ah

Fourth, explain and clarify how to carry out the work of worship and prayer

First, before we perform ablution and pray, we perform the act of worship, the doctrine of prayer in this way, which is, O God, I will obey you and do the work. Performing the act of worship is a prayer, for example, the prayer of the first third of the meeqat at night until I reach my goal, which is your satisfaction with me, O God, O Lord of the Worlds, three times,

then we perform the act of worship, ablution in this way. The form is washing the hands three times, then washing the arms up to the elbows three times, then washing the mouth from the inside with the mouth Three times, then wash the nose from the inside by inhaling three times, then wash the face three times, then wash

The ears from the inside three times, then wiping the head from the middle only three times, then washing the neck three times, then washing the legs up to the ankles three times

Then ask forgiveness three times or double it, then read the Qur'an, a surah or a few verses, three times, then pray three times

Then go to the prayer and stand on it to begin the prayer by raising the hands up to the ears,

then we say the saying, "God is Great", then we seek refuge in God from the accursed Satan, then we say, "In the Name of God, Most Gracious, Most Merciful", then we begin the worship of prayer by saying Surah Al-Fatihah once, then we say, "Amen", then saying the saying, "God is Great", then bowing, then saying In bowing, saying, Glory be to God, twice, then saying the saying, "God is Great", then bowing, then saying, "Glory be to God", twice, then saying the saying, "God is Great", then standing upright, then saying the saying, "I bear witness that no" There is no god but God alone, with no partner, twice, then saying the saying, "God is great", then prostrating, then saying in prostration, saying, "Praise be to God", twice, then saying the saying, "God is great", then we sit cross-legged on our feet

from behind, then we pray for our master Muhammad, may God bless him and grant him peace, in this formula, O God, bless and grant him peace." Our Master Muhammad and his family and companions, may God bless him and grant him peace, often once, then we stand up to stand upright and begin the second rak'ah, which is the same Exactly like the first rak'ah, with this difference, which is that after we sit cross-legged from behind and then pray for our Master Muhammad, may God bless him and grant him peace, in this formula, O God, bless and bless our Master Muhammad and his family and companions, and grant him peace, many times, we do not stand up to pray a third rak'ah, but rather we turn to The right and we say the saying: May the peace and mercy of God be upon you, then we turn to the left and

say the saying: May the peace, mercy, and blessings of God be upon you, then we turn to the left and say the saying: May the peace, mercy, and blessings of God be upon you After that, we pray a single rak'ah, just like the second rak'ah, which, as we explained, we pray due to human error

The goal of performing worship and prayer is to unite God Almighty, and this is done in the middle of the prayer immediately after standing up from bowing, as we explained in how to do the work of worship and prayer

The reason for saying acts of worship and the fruits of worship in prayer in these numbers is,

firstly, what are the acts of worship and the fruits of worship in prayer

The acts of worship in prayer are the takbir and the fatihah, and prayers and peace be upon the Messenger of God, and peace in conclusion

All of these acts of worship are said once in one rak'ah and three times in relation to the three rak'ahs of this means that when a person performs the obligation imposed on him, he performs the entire prayer of three, and the acts of worship that are within it are three, and this is what we want to reach because, as we have explained, the person who performs the task of worship and the task The fruits of worship are formed

Of two identical halves, meaning that the basic principle is that he performs the act of worship twice, once for each half of the two identical halves, and the third time is according to the rule that a person cannot do the work completely correctly, so we increase the number of times to work by approximately a third of the number of times, and here we will increase one, so worship has become three times, whether At the level of worship, prayer itself, or at the level of what is within worship, prayer, and every worship is one and asymmetric element As for the fruits, they are identical, so they are treated as two, not one. Therefore, they are said six times, and they are: Glory be to God, and I bear witness that there is no god but God alone, with no partner, and praise be to God

Evidence that the correct prayer is performed in this way

First, God Almighty, the Almighty, said in His Mighty Book, "And establish prayer", not "perform prayer." There is a difference between "establish prayer" and "perform prayer", so establish prayer means "make prayer." This means that God Almighty, the Almighty, and His Messenger, may the best prayers and peace be upon him, say that the prayer that the Messenger of God established, our master Muhammad, may God bless him and grant him peace, may God bless him and grant him peace, or make it, is subject to renewal and modification at the hands of

innovators and scholars for every era until they finally reach The correct prayer in its entirety, but if God Almighty said, "Pray the prayer", then its meaning is that the prayer that the Messenger of God, peace and blessings be upon him, performed has no modification, and he called it as it is, and I, the Muslim architectural scholar, performed the prayer as God commanded us, out of the scientific discovery that I discovered, which is the discovery of the body that I say. In it, the entire universe consists of bodies that are made up of three components, have seven components, and are presented as a task by five bodies, and each body is made up Of seven components

The evidence that the completely correct prayer is performed in this way is for the sake of discovering the body

Example

The body's seven tasks consist of seven tasks, which are the basics of life task – the disease prevention task - the treatment task – the luxury task – the work task – the worship task

The plant body is made up of seven components:

The first component is herbal plants with medicinal grains in the desert, whose function is to treat sick humans and animals

The second component: Eating plants in fertile lands on the banks of rivers are called vegetables, whose function is to ensure the basics of life in terms of eating for humans

The third component is eating plants in forests called fruits

The fourth component is eating plants, but for animals, which are in the desert as grasses where sheep graze, in fertile lands on the banks of rivers as plants grown by farmers, and in

261

forests there are vast green spaces for animals called grasses

The fifth component: Ornamental plants are colorful roses and flowers whose function is to provide luxury to humans through their beautiful shape and fragrant scent

The sixth component is ornamental plants with large green leaves that have a large shade and whose function is to shade with their large leaves

The seventh component is ornamental plants that grow on the ground horizontally and not vertically, called grass, whose function is to

262

cover the ground with it so that we can lean on it and sit on it

An example of a plant that is one of the components of the plant body

Eating plants in forests are called fruits

Its function is to provide well-being to humans in terms of food, for example the mango tree, and for example one of the days that make up the body, the week is Saturday, first of all, the mango tree consists of seven components:

The first component, the root, the second component, the leg, the third component, the buttocks, the fourth component, the middle of the body, the fifth component, the branches, the sixth component, the neck, the seventh component, the head, the fruits, their primary place in the component is the middle of the body, but God took them out of the middle of the body and placed them on the branches to send to man a message that the mango tree gives him its fruits, so if a living being wants To give a living being something that he gives to him with the ends. As for its fruits, they are on the branches, but their number is unknown, so the fruits are as they are You will know that their number is the same for all bodies, but their distribution is not fixed

We will take an example from the seven tasks, which is the task of worship

Worship, after the union of some of its components, consists of five components, which are the doctrine united with purity – seeking forgiveness – the Qur'an – supplication - takbir united with prayer

As for the bearers of the ten fruits of the mission of worship, they are the component of prayer itself, and this component is the rak'ah consisting of five pillars, which is standing to say Al-Fatihah –bowing to praise – standing to bear witness - prostrating to praise –sitting to conclude with prayers and peace upon our master Muhammad, may God bless him and grant him peace

In order for the worshiping person to be a bearer of fruits according to their natural law, in order to present them to God Almighty, He repeats the rak'ah bearing three fruits ten times by praying two rak'ahs at the beginning of each time of the day

Thus, we see that the worship we mentioned applies to God's law in creating the universe after we associated it with plants

The wisdom behind God making prayer throughout the entire day is that we know that we were created only for worship, and indeed we live throughout our lives in every way

A meeقات in which we wake up in prayer and worship to God Almighty, and the three fruits in each rak'ah are Glory be to God four times in bowing, and I bear witness that there is no god but God alone, with no partner, four times after standing up from bowing, and praise be to God four times when prostrating

Interpretation of the two rak'ahs in full: First, we say "Allahu Akbar" to expel Satan, and in order for us to be able to pray a second time, we begin with "Al-Fatihah." Thirdly, we kneel and say the first remembrance or fruit, which is "Glory be to God for His ability to coordinate between the components of the body until He made them one body and made them one body until we unite God Almighty, the Almighty, and we say after bowing and then standing." I bear witness that there is no god but God alone, with no partner, then we prostrate and thank God for the blessing that God Almighty has united us God Almighty, then we conclude the stage of monotheism, which is the first rak'ah, with prayers and peace be upon the Seal of the Prophets, then we perform the second rak'ah,

and after prostration, we conclude the stages of monotheism with prayers and peace be upon the Seal of the Prophets, then we turn to the right and say, "Peace and mercy of God be upon you", then we turn to the left and say, "Peace and mercy of God be upon you." When we finish praying, peace and blessings be upon you here means farewell after we have finished praying

A lesson on dealing with the tasks that a person is assigned to do in detail

The first task is the task of doing the task of sleeping

We do the job of sleeping through the ideal bedroom and the ideal bed from the forest and desert environments, as the bed is made of forest tree wood and a strong metal, which is iron, and precious metals for decoration from the desert environment

The second task is the task of doing the drinking task

In order to carry out the mission of drinking, we drink milk from desert livestock if we want medicine milk, we drink milk from land livestock if we want to drink milk to barely satisfy ourselves, we drink milk from forest livestock if we want to drink milk for luxury, and we drink river water in general so that we can live and drink desert herbs if we want to

270

We drink medicinal herbs or plants, and we drink tea leaf drinks and other stimulants that are present or grown in forests for luxury

The third task is the task of doing the eating task

In order to carry out the task of eating, we must eat desert livestock and birds if we want to eat the meat of livestock or birds for medicine, and we must eat land livestock, birds, and vegetables if we want to eat bird meat, livestock meat, and vegetable plants for satiety, and we must eat livestock, birds, and forest fruits if we want. We eat livestock meat, bird meat, and fruit plants for luxury, and we eat fish from rivers, seas, and soft oceans for luxury

271

The fourth task is the task of carrying out the task of preventing diseases

This is done through general and personal hygiene

The fifth task is the task of carrying out the task of treatment

This is done by eating desert livestock and birds, drinking desert livestock milk, drinking desert herbs, as well as eating forest fruits

And seafood for treatment

The sixth task is the task of doing the well-being task First, there are seven types of luxury: first, the luxury of sleep, which is done through the situation we mentioned, second, drinking, which is done by drinking drinks from the leaves of some forest trees, such as coffee, tea, and drinking fruit juices

As well as drinking dairy

And the luxury of eating, such as eating fruits, meat, forest livestock, and fish of water bodies

The luxury of viewing by watching ornamental birds and ornamental animals. . Fourth, luxury by hearing about birds and ornamental animals,

fifth, luxury in clothing. By wearing clothes made from the fur of animals that live in cold forests, by wearing jewelry that we take from the mountains of gold and other precious metals in the desert, and by wearing precious stones that are in the mountains of forests

Sixth, luxury through means of transportation, seventh, luxury through a luxuriously built house

What every worker and every business needs from raw materials

First, raw materials for homes are taken from forest and desert environments

The living organisms that we want and need to build the house and the environment from which these organisms come. First, the colored stones that we use in building the house are from the forest mountains to build the walls, second, the cement diamonds that we place between the molds to connect the molds to each other, we get from the desert quarries, third, the wood that we need to make doors with. Windows, beds and chairs are from forest trees, fourthly, the precious metals that we need to decorate beds, chairs and utensils are from the desert mountains Fifthly, the semi-precious metals that we need for utensils are also from the desert

Secondly, raw materials for clothing

It is taken from the fur of animals in cold forests, thirdly, what the doctor needs is from living organisms in the desert, thirdly, what the specialist needs to bring luxury to people is from living organisms that live in cold forests

So, if we consider what we mentioned about the most important tasks that humans are assigned to do and how they work, we find that when a person performs a task, he must seek help from living organisms present in three environments, or at least two environments, for example

The task of sleeping: A person performs the task of sleeping by sleeping in the ideal bedroom and on the ideal bed, which are from

the forest and desert environments, as the bed is made of forest tree wood and a strong metal, which is iron, and precious metals for decoration from the desert environment

Another example

The second task is the task of carrying out the drinking task. In order to carry out the drinking task, we drink the milk of desert livestock if we want the milk of medicine, and we drink the milk of land livestock if we want to drink the milk to barely satisfy ourselves, and we drink the milk of forest livestock if we want to drink the milk for luxury, and we drink river water in general so that we can live and drink Desert herbs if we want to drink medicinal herbs or plants and drink tea leaf drinks and other

stimulants that It is found or grown in forests for luxuryTherefore, humans living in each of the seven environments must cooperate and get to know each other with the people of all the living environments, the seven environments, out of harmony and love, so that every Muslim person on Earth can carry out the seven tasks he is assigned to do

A book on how to do a general work task correctly

First, define the work task

The task of work is the task of each manufacturer specializing in an industry in a specific field to create everything that a person needs to do the work of the seven tasks assigned to do their work, in which each task consists of seven tasks that the person performs in seven stages

These seven tasks, as we mentioned, are:

The task of doing the basics of life task

The task of carrying out the task of preventing diseases

279

The task of carrying out the task of treatment

The task of doing the job of well-being

Task to do the job task

The task of performing the task of performing
the doctrine correctly

The task of doing the task of worship

But the question here is what are the things we
need to do these tasks

What we need to do these tasks is for
specialized manufacturers to make things

whose design or shape and the raw materials that we will put in each part of the design are sufficient for us to do these tasks that we mentioned

These things that we need to do these tasks are

1- The shape of the city's plot of land

2- The three safety elements, which are doors and windows – family – your opinions

3- Utensils

4- The purposes we need for treatment, well-being, disease prevention, belief, worship, and work itself

5- Clothes suitable for cold and hot weather

The three components that enable us to work and make the things we need to do the seven

281

tasks are 1- Drawing and designing the shape of the element on a piece of paper

2-choose the appropriate raw materials for each part of the design

3- Form it in reality and then put the raw materials in itWe begin the process of drawing and designing the things we need to do the seven tasks on the paper

First, draw and design the shape of the city plot on paper

Explaining and clarifying how to design the shape of a city plot of land

First, a person cannot make a design from the structures of his ideas and then place it and

build the city on it. So the solution is to use things around him to put their shapes into the parts of designing the shape of the city's plot of land. There is nothing that we can use that is appropriate for designing the shape of the city's plot of land except these three components of design, which are:

Mainly plants, birds and fish

And animals in secondary ways

Here there is a question known to all architects, which is if we take the design of the shape of the parts of the city's plot of land from nature as it is, then what is new. For example, we make the design of the shape of the city's plot of land in the shape of a rose, starting from the roots to the head. In this case, I respond to you

and tell you that this is actually a big design line
and not There is renewal

But what I have achieved scientifically and what
I will do is

Design the shape of the city plot in this way

First, the city is a body made up of seven
components, and these seven components are
similar to the seven organs of any living
organism, which are the root, leg, buttocks,
middle of the body, limbs, neck, and head

In place of each of the seven components that
we mentioned, we place a similar component
of the seven components of the three living
organisms, which are plants, birds, and fish,
meaning that the location of the component is

284

the tip of the shape of the city's plot of land.

We place one of the heads of the roses

In place of the component, the back of the shape of the city plot of land, we place the back of the fish

This is a complete explanation of how to design the shape of a city plot of land

First, the three basic components are:

Mainly plants, birds and fish

And animals in secondary ways

First, there are three types of cities

1-a small city

285

2-a medium-sized city

3-a large city

First, the small city

What we put in place of each of the seven components of the city is

1- The middle component of the body, we put in its place the fruits of desert herbs, which are grains

2- The neck component, we place in its place the neck of the same fruit that we placed in the middle of the body

3- The head component: We place in its place one of the heads of small ornamental plants in the desert

4- The limbs component: We place in its place two limbs of small birds in the desert

5- The stern component is replaced by the stern of small fish in the seas

6- The component is the bases and columns that represent the roots or legs that stabilize the buildings, and we place them in their place as the legs and hips of small desert animals

Secondly, medium-sized cities in area

What we put in place of each of the seven components of the city is

1- The middle component of the body, in its place we place dry fruits and vegetables

2- The neck component, we place in its place the neck of the same fruit that we placed in the middle of the body

3- The head component: We place in its place one of the heads of medium-sized ornamental plants on land

4- The limbs component: We place in its place two limbs of medium-sized birds on land

5- The stern component is replaced by the stern of medium-sized fish in rivers

6- The component is the bases and columns that represent the roots or legs that stabilize the buildings, and we place them in their place in the shape of the legs and hips of medium-sized land animals

Third, large cities

What we put in place of each of the seven components of the city is

1- The middle component of the body, we place forest fruits in its place

2- The neck component, we place in its place the neck of the same fruit that we placed in the middle of the body

3- The head component: We place in its place one of the heads of large ornamental plants in the forests

4- The limbs component: We place in its place two limbs of large birds in the forests

5- The stern component is replaced by the stern of large fish in the oceans

6- The component is the bases and columns that represent the roots or legs that stabilize the buildings, and we place them in their place in the shape of the legs and hips of large forest animals

A reflective look at the previous clarification

We have achieved three achievements in designing this city:

1- Create a wonderful city with stunning beauty because it is taken from nature

2- The city has a major renewal for two reasons: the first is that we did not take a living organism and put it as the shape of a piece of land as it is, and the second is that we took from every living organism the fruit of the thing that distinguishes it and placed it in the appropriate place for it in the shape of the piece of land, and this created a new shape resulting from the correct structure that we referred to. It is that we took from every living

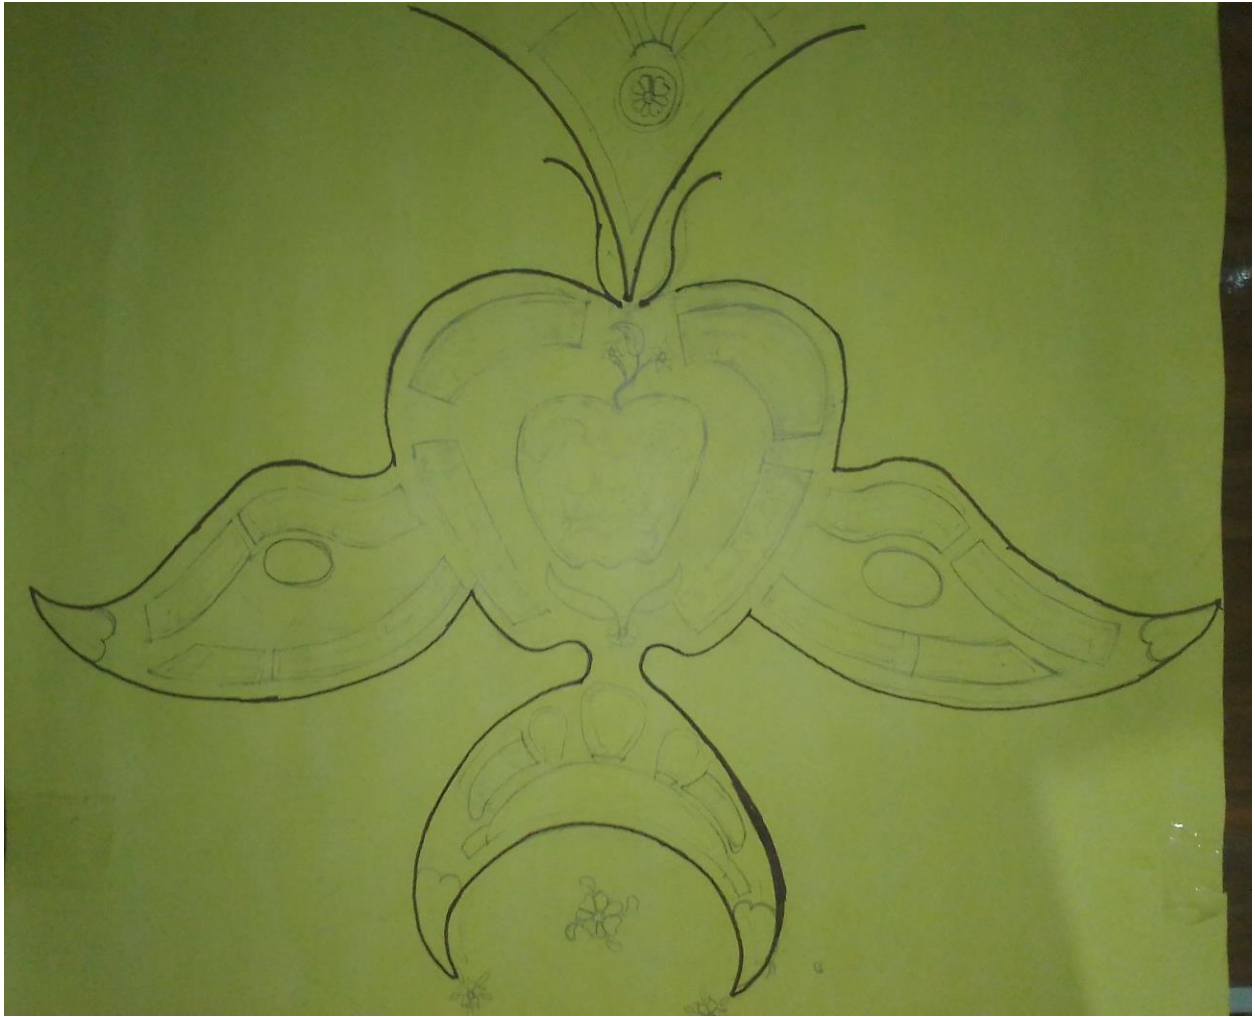

organism the fruit of the thing that distinguishes it, then we placed it in the appropriate place for it in the form of a piece Earth

3- Designing in this way will create for us architects and designers in general richness and richness in the presence of forms of the three components that we mentioned, which are countless, which are plants, birds, fish, and, secondary to animals

After we design the shape of the city's plot of land, we do the following, which is to design three spaces in each of the five components of the city after excluding the two components,

291

the bases and columns, and these spaces represent two-thirds of the area of each component, the cities of the five components, and they are designed in a way that is consistent with the shape of the plot of land, and in these spaces we place the buildings in them. Which is designed

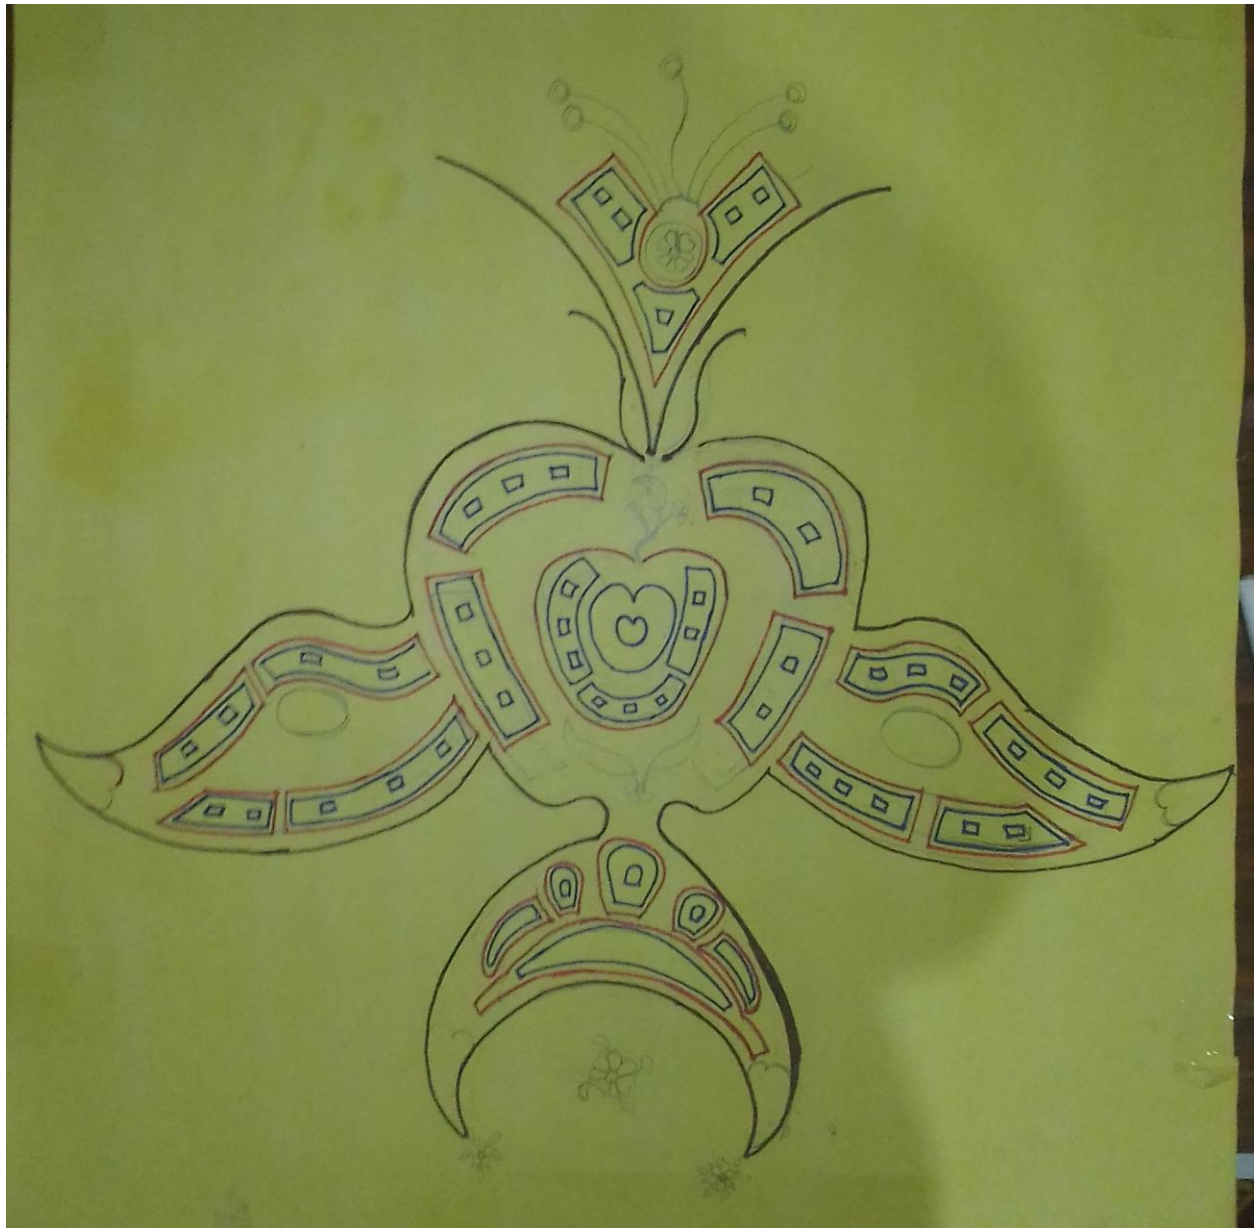

The islands are consistent with the shape of the city plot containing buildings in red

293

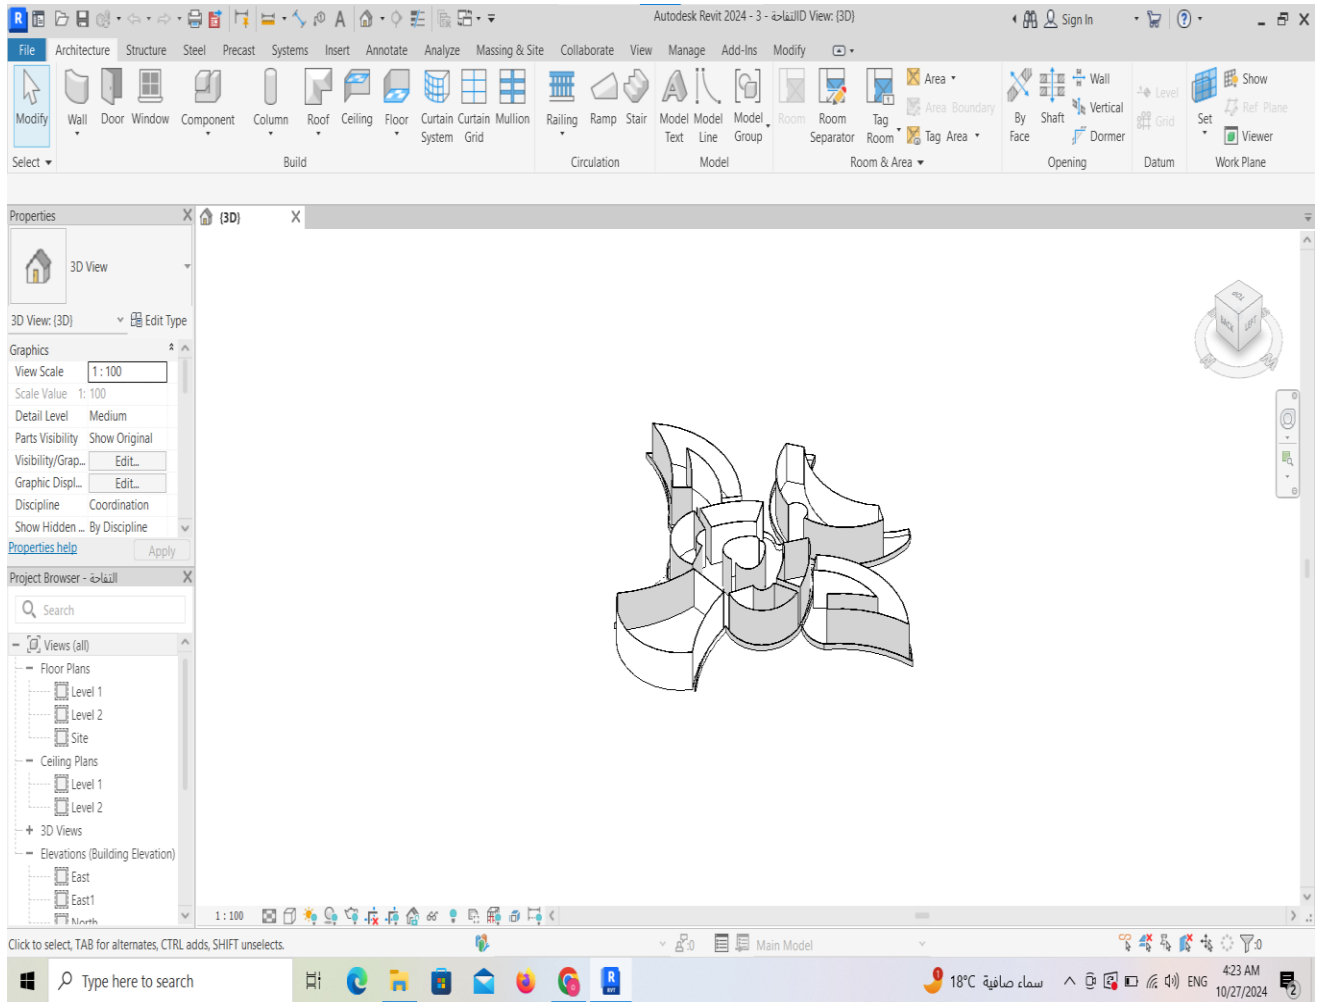

Buildings and skylights are blue

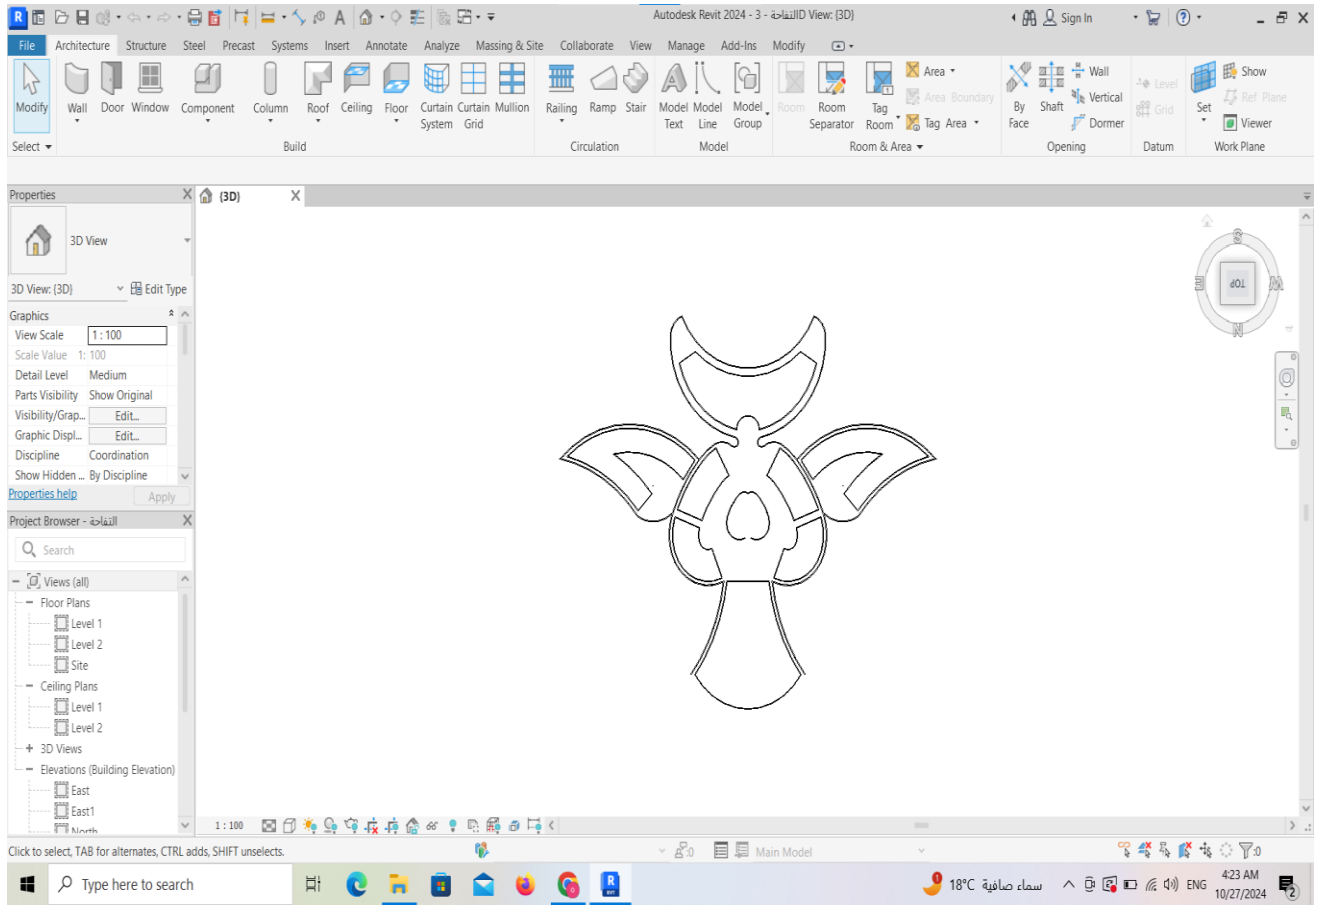

Green areas are green

This
same city was designed using the Revit architectural
drawing program in order to prove that we can
build this type of city

How to design

2- The three safety elements, which are doors and windows – family – your opinions

3- Utensils

4- The purposes we need for treatment, well-being, disease prevention, belief, worship, and work itself

These items are manufactured so that they are suitable to meet the human need in performing his tasks in terms of the form of the design and in terms of the raw materials that will be placed in the parts of the design and so that they are consistent with the place they are in

2-raw materials

300

The three basic components of raw materials are:

Mountains, animals and seas

The secondary component is the plant

What each of the four components of a human being does to perform his duties is:

1-mountains

Layasat mountains, such as cement and gypsum, whose function is to provide humans with one of their needs, which is to connect bricks for the wall to each other, and they are native to the desert

301

Mountains of precious metals, whose function is to provide people with luxury by wearing jewelry, are native to the desert

Mountains of stones, whose function is to provide humans with the stones they need to build homes and facilities

It is native to forests

Mountains of precious stones, whose function is to provide people with luxury by wearing precious stones in the form of necklaces and rings, and they are native to the forests

2-animals

We use four types of fur to make clothes:

302

Desert animal fur for light clothing

Fur of dry animals for medium clothing

Cold forest animal fur for heavy clothing

Animal fur in frozen areas for very heavy clothing

3- Maritime

We provide four types of marine resources, such as fish, ornamental pearls, and others

4- Plants make us cotton

He studied the correct general rule for the matter of fruits in bodies

The basic rule regarding fruits in bodies says the following:

There are ten fruit carriers in each of the five organs of the body after their union, each carrier carrying three fruits, as each element of each organ is composed of two pairs, and the elements of the organs are five after their union, and each element of the organs contains two fruit carriers carrying one pair and a carrier of the other pair, and these carriers and their fruits vary. Its quantity and distribution from one body to another, but the ideal body is as we explained

304

In this case, the number of fruit bearers in the body consisting of five organs is 5 times 10, equal to 50 fruit bearers, and each fruit bearer bears three fruits, so the number of fruits is 3 times 50, equal to 150 fruits

Let us not forget that there are seven copies of each organ of the body, so the normal number of fruits is 7 in 150, equal to 1050 fruits

This rule does not apply completely to all bodies, but rather applies to bodies in a relative manner like this

The earth body has no seven copies or fruits

The body, the layer on which there is life, has seven copies, but it has no fruits, but its

305

members are carriers of the living being, its fruits, and the single waters, such as rivers

The living being body exists from one of the seven elements of its components, seven copies, and its fruits are that it has ten fruit carriers in each organ, and each carrier carries three fruits

The seven-tasking body has seven copies of each of its seven components, and its fruits are that it has ten fruit carriers in each organ, and each carrier carries three fruits, and we should not forget that each organ has seven copies

This rule is applied as an example to the body of the seven human tasks, as each task is supposed to contain ten bearing fruits, and we will take an example, which is worship, in which the fifth and final component is the component of worship and prayer, and it is composed of five components after their union, and at the same time it is the component carrying the fruits of the task of worship, which is Glory be to God. I bear witness that there is no god but God alone, with no partner, and praise be to God, and that this component may be a bearing of fruits that He provides Man, with all the fruits he contains, belongs to God Almighty, the Almighty, during the five unified times of the day. We repeat it ten times, just like any fruit bearer, by performing two rak'ahs at each of the five unified times of the day, while

increasing one rak'ah for each two rak'ahs, taking into account human error, and the conclusion is:

When a person performs the entire task of worship, he is thus offering to God Almighty in every meeqat of the day three fruits in each of the three rak'ahs that we perform at the beginning of each meeqat, and each fruit is said 6 times for three rak'ahs and twice for one rak'ah

In conclusion, this is the correct rule for fruits in bodies

Any rule regarding the matter of fruits in bodies that contradicts this rule in the book itself is incorrect, and we apologize for this mistake that we corrected

An illustrative general picture of the book

I learned that pilgrims circumambulate the Kaaba seven times, and then after that I

learned that galaxies, planets, the sun, and the

moon circumambulate seven times in each revolution, so I searched and then discovered that the Earth circumambulates seven times by performing each of the seven layers of the Earth its mission, and that the living organism also circumambulates seven times by Through each of the seven components performing its mission, the human being also circumambulates seven times, as each time he circumambulates with performance One of its seven tasks, as well as the layer that has life and the galaxy, But there is a note, which is that these bodies circumambulate in the direction from left to right and not from right to left as pilgrims circumambulate, so pilgrims must circumambulate from left to right like the rest of the bodies of the universe that we mentioned

Important information about the spiritual circumambulation

First, the six layers of the body circumambulate the earth around the seventh layer with the aim of straightening it out by circumambulating around the layer that has life on it. This is done by carrying the seventh layer of the seven plots of land that make up the body, the layer that has life on it, and at the same time circumambulating around God with the aim of reaching Him, so you reach the first goal and do not reach it. To the second goal of the greatness and majesty of God Almighty

Then the seventh layer circumambulates around the layer that has life on it with the aim of carrying the seventh layer of the seven plots of land that make up the body, the layer that has life on it, and at the same time it circumambulates around God with the aim of reaching Him, so it reaches the first goal and does not reach the second goal of the greatness and majesty of God Almighty

Secondly, the six plots of land of the body, the layer on which there is life, circumambulate around the seventh plot of land, the land on the banks of the rivers, united with the rivers, with the aim of correcting them to contain the lands of the rivers, and at the same time, they circumambulate around God with the aim of reaching Him, so they reach the first goal and do not reach the second goal of the greatness

312

and majesty of God. Glory be to Him, the Almighty, the Almighty

Then the seventh piece of land circumambulates the land on the banks of the rivers, united with the rivers around the lands, the rivers with the aim of straightening them to contain the waters of the estate, and at the same time it circumambulates around God with the aim of reaching Him

So you reach the first goal and do not reach the second goal due to the greatness and majesty of God Almighty

Then the lands and rivers roam around the single waters with the aim of preserving and containing them, and at the same time they

313

roam around God, reaching the first goal and not reaching the second goal of the greatness and majesty of God Almighty

Then the single waters circumambulate around the living organism with the aim of nourishing it, and at the same time they circumambulate around God, reaching the first goal and not reaching the second goal of the greatness and majesty of God Almighty

Thirdly, the seven living beings circumambulate around themselves in order to feed and then grow, and at the same time they circumambulate around God, reaching the first goal and not reaching the second goal of the greatness and majesty of God Almighty

Then the six living beings circumambulate around the living being, the human being, with the aim of correcting him to circumambulate by performing the seven tasks that he is assigned to perform, and at the same time they circumambulate around God, reaching the first goal and not reaching the second goal of the greatness and majesty of God Almighty

Then the person circumambulates by performing the six tasks until he performs the seventh task of worship, and at the same time he circumambulates around God until he reaches the goal of reaching it, so he reaches the first goal and does not reach the second goal of the greatness and majesty of God Almighty

Then a person circumambulates the task of worship so that he can perform the act of

315

worship and prayer, and at the same time he circumambulates around God until he reaches the goal of reaching it, so he reaches the first goal and does not reach the second goal of the greatness and majesty of God Almighty

Then the person circumambulates the act of worship Praying until the goal is reached is saying the three remembrances: Glory be to God, I bear witness that there is no god but God, and praise be to God

These are the three fruits, and at the same time he circumambulates around God until he reaches the goal of reaching it, so he reaches the first goal and does not reach the second goal of the greatness and majesty of God Almighty

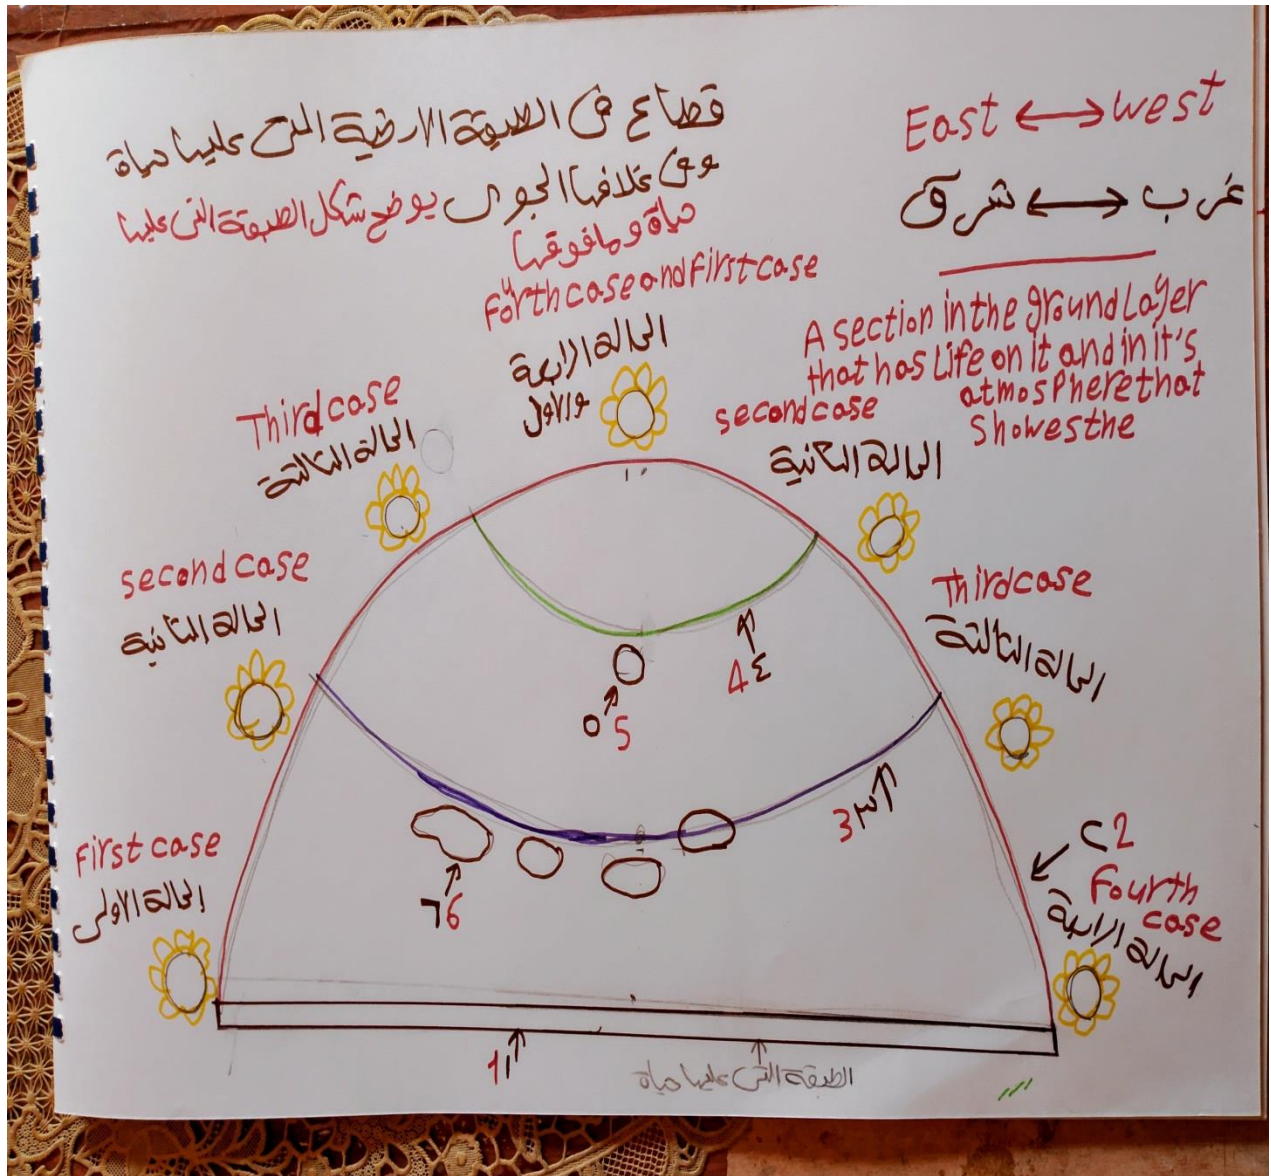

316

Fourth, the six components of the galaxy circumambulate around the main component with the aim of straightening it, and at the same time they circumambulate around God until they reach the goal of reaching it, so they reach the first goal and do not reach the second goal of the greatness and majesty of God Almighty

Then the component circumambulates the head around itself with the aim of achieving activation and correction of itself, and at the same time it circumambulates around God until it reaches the goal of reaching it, so it reaches the first goal and does not reach the second goal of the greatness and majesty of God Almighty

317

Describe the process of the sun's rotation
above the Earth

319

A sector in the layer that has life and its atmosphere

First, we will discuss each element with its number to explain it, then we will provide some information

1- The body is the layer that has a flat life. The layer that has a life is divided into two parts: an eastern part that is fed by the sun for 12 hours or so, and then after that it is left at night to feed the western part for about 12 hours as well

2- The atmosphere of the layer that has all life on it, which is in the form of a semicircle whose

320

center is the middle of the layer that has life on it, or the Earth, and it represents the path or astronomy in which the sun moves until it ends its journey after 24 hours and stabilizes, and then after that a new sun comes to make the journey from new

He said, "Come, and the sun will flow to its resting place"

3- The path of clouds, which is as we observe at the end of the first third of the atmosphere

4- The path of the moon, which is as we observe at the end of the second third of the atmosphere

5-the moon is a self-illuminating place

6-clouds

321

The first state of the sun

It is the stage of sunrise and the beginning of its journey on the eastern part of the Earth, and here it is at the height of its strength, as God created it at this time and its temperature is weak

The second state of the sun

It is the stage of the sun's presence at the beginning of the second third of the atmosphere in relation to the eastern Earth, and at the same time the beginning of the second third of the day, and its temperature is moderate

The third state of the sun

322

It is the stage of the sun's presence at the beginning of the third third of the atmosphere in relation to the eastern Earth, and at the same time the beginning of the third third of the day, and its temperature is moderate

The fourth state of the sun

It is the stage of the sun's presence in the middle of the atmosphere, and this means sunset and the beginning of night for the eastern part and sunrise and the beginning of day for the western part

The fifth state of the sun

323

It is the stage of the sun's existence at the beginning of the second third of the atmosphere in relation to the western Earth, and at the same time the beginning of the second third of the day, and its temperature is moderate

The sixth state of the sun

It is the stage of the sun's presence at the beginning of the third third of the atmosphere in relation to the eastern Earth, and at the same time the beginning of the third third of the day, and its temperature is moderate

The seventh state of the sun

Here the sun sets on the western earth and settles and never moves again, then a new sun comes to shine on the eastern earth and the journey begins again

Information about the sun

The distance of the sun from the living being horizontally makes the intensity of its heat rays weak for him and also makes it descend and fall for him as well, meaning that the real position of the sun is high above the earth, but its great distance horizontally from the living being makes him see it descending and descending, but its distance is only vertical, which does not weaken the intensity of the sun's heat. For him, it does not make it fall and fall for him, but rather he sees it as high and higher than it at its

325

natural height because it is not Distant horizontally, so the farther the sun is from the living being horizontally, the weaker its temperature becomes, the more it goes down and down relative to it, and the closer the sun gets horizontally, the more intense its temperature becomes

It appeared to him in a natural state in its distance and height from the ground

It is spherical in shape and radiates its rays at an angle of 45 on itself towards the Earth from all points and directions in it, and it swims in its orbit in the middle of the Earth

Description of the sun during the six summer months

326

During these six months, the sun is intense, heavy, and strong, and due to its weight, its movement is slow, so the summer day is long

Description of the sun during the six winter months

During these six months, the sun is weak and light, and due to its lightness, its movement is fast, so the winter day is short
